

BizTalk Server Monitoring Tool - BizTalk360 Announces Availability of Version 7.8

Kovai Limited released BizTalk360 version 7.8 last week adding 4 new key features to its advanced BizTalk Server Management and Monitoring tool.

LONDON, UK, October 28, 2014 /EINPresswire.com/ -- Kovai Limited released their latest version of BizTalk Server Monitoring and Management tool last week. BizTalk360 Version 7.8 will be made available to new and existing customers with immediate effect.

Version 7.8 includes four major features — BizTalk Server [Advanced Process Monitoring](#), [EDI Status Reporting](#), System Profile, User Profile, and enhancements to the existing version of the product (Version 7.5) that have been added to improve the user experience.

In middleware solution like BizTalk server it's crucial to keep an eye on the transaction volume of messages flowing through the system and get alerted if required Service Level Agreements (SLA's) are not met. The Advanced process monitoring solution we added in this release solves the exact problem. An example scenario will be "Every 15 minutes we expect over 2000 message from our SAP system". It also comes with its own dashboard to see historical results.

Saravana Kumar (founder, CTO) said, "Right from day one, our vision is simple, we wanted to create one solid tool that will help any Microsoft BizTalk Server customers to improve the day to day operations, administrations, and monitoring of their BizTalk Environments. For us as a company, every new release is a step in that direction".

The latest version of BizTalk360 can be [downloaded here](#).
