

# Herb Grower, Sweet Aromatic Beauty

VANCOUVER, CANADA, November 4, 2014 /EINPresswire.com/ -- Plant enthusiasts and organic cooks know the value of having fresh herbs growing in the kitchen. But if you have a small apartment, pets or young children, finding a good spot for even a few pots can be difficult. That's where the Herb Grower Vertical Garden System comes in. In less space than a picture or wall hanging, a single unit can hold four potted plants securely. The Herb Grower uses a [gravity-feed irrigation system](#) to quickly and easily water the plants. Just pour the water into the top watering tray, and let it trickle down the feeder tubes to each pot. The pots lift out individually, making it easy to trim the plants or repot them, as needed. There is a drip tray at the bottom of the system to catch any excess water, and the unit is designed to protect walls from moisture. The Herb grower can help keep your indoor garden

out of reach for young children and pets, while creating an opportunity for older children to enjoy growing something.

In larger wall space, two or more Herb Grower Vertical Garden systems can be arranged side by side. This allows the indoor gardener to arrange potted plants to create visual effects. Imagine displaying magnificent abstract designs made up of living plants! Amaze family and friends by creating salads or drinks flavored with leaves plucked from plants growing right in your kitchen. Brighten up a corner with cheerful flowers, or relieve the stale, shut-in feeling of indoor winter air. Installation is as easy as hanging a picture or putting up a curtain rod.

## The Herb Grower

Victoria, co-founder of Vertical Gardens Studio, explains why the company developed the Herb Grower. The vertical gardens that can be seen in large malls or shopping centers require tubes, hoses and pumping systems. They are too heavy and require too much mechanical expertise for average home-owners to utilize. Yet vertical gardens make use of space that would not otherwise be used in any way, add beauty, and can even be beneficial to indoor air quality. The Herb Grower, because it does not require hoses and pumps, and because it is [designed to be easily attached](#) to a wall using only common household tools, puts the beauty and efficiency of a wall garden into the hands of anyone who would like to have an indoor plant or two.

The production model, which will be made from BPA free, environmentally friendly, UV protected plastic, has 25 individual pieces and will require 9 different injection molds. The design is complete; the material suppliers lined up, so all that remains is creation of the molds and the actual manufacturing itself.

The Kickstarter event, in addition to collecting a little seed money for the project, is also a way to get the word out about this nifty little planter. The folks at Vertical Gardens are hoping to contact other indoor gardening and organic cooking enthusiasts, or even just people who love good, tasty food. They hope to create connections between people who enjoy indoor gardening.

The [crowdfunding campaign](#) is also a way for people to pre-order this ingenious product design. Contributors who send \$5.00 or more receive a downloadable copy of Engineering Sheet A2, suitable for display – to prove that you backed this nifty gadget. The first 250 people who order can get a single, four-planter, Herb Grower for \$49.00 + shipping. This is an Early Bird special, so don't wait. At this price, you can be sure they won't last long. If you miss out though, you can still get a unit for \$70.00 (shipment included). Contributors can also request the Herb Grower 2X, which can hold eight pots, or send a bit more and get multiple units to use as gifts or to create a personal wall of plants.

Whether making a large or small contribution, or if you just take the time to look at the lovely arrangements pictured on the Kickstarter Herb Grower website, be sure to share with others. This product design is well worth spreading the word, and is sure to make many indoor gardeners, interior decorators, cooks and people who just like a little greenery in their home, very happy. You never know who might truly benefit from having a cheerful little plant or two growing on their walls.

About: Vertical Garden Studios ([www.verticalgardensstudio.com](http://www.verticalgardensstudio.com)) s bringing to fruition the goal of making wall gardening accessible to anyone with a small bit of wall space. Their unique product design makes creating a green spot as easy as hanging a picture.
