AYU GNSS sells every major brand of precision GNSS hardware, including the latest models of Geomax, [Trimble GPS GNSS](#), [Leica GPS GNSS](#), Topcon and Sokkia products. The company offers free shipping on all orders over \$999.

Originally a military technology, GNSS surveying is used today to determine precise locations all over the globe, regardless of weather, time of day or logistical and infrastructural difficulties. The hardware necessary to achieve this precision and reliability has become smaller and easier to use, with powerful GNSS systems now a commonplace feature in many consumer devices like automobiles and smartphones.

AYU GNSS SURVEYING's customers include construction, mining, geologic and agricultural firms where large, accurate topographical surveys are a daily requirement and accuracy is at a premium. The company specializes in top-shelf, cutting-edge surveying equipment to meet these demands. The highest-precision equipment takes advantage of RTK (real time kinematic) technology, which interprets the phase shift in satellite signals to calculate position with centimeter-level accuracy. All products sold by AYU GNSS provide unsurpassed versatility, efficiency and usability, from RTK applications to entry level machine control.

AYU GNSS has built strong relationships with the mining industry in particular. In 2014, the company established itself as a firm leader in supplying GNSS GPS to mining companies around the world.

Ensuring that customers get the most out of their surveying and positioning equipment is part of the mission at AYU GNSS. To that end, the company provides responsive support from qualified technicians.

AYU GNSS has tremendous faith in its product catalog – so much so that the company extends an industry-best 3-year warranty on every system. In the event of a manufacturing defect, the company will exchange the defective project with a new one at no charge to the user.

High-precision surveying and equipment control is becoming an increasingly busy segment, particularly in developing nations with surging economies. Anticipating this growth, AYU GNSS plans to eventually open branches in strategic locales on every continent.

#### About AYU GNSS SURVEYING

AYU GNSS SURVEYING's legacy began in the early 2000s with a small, dedicated group of geomatics engineers driven by the exciting possibilities of an emerging technology. Since then it has evolved into a global leader in GNSS surveying with over 550 employees and the industry's most comprehensive line of Global Navigation Satellite System (GNSS) products. AYU GNSS SURVEYING now provides its GNSS receivers, antennas and subsystems to developers.
