

Research Scientist Aurangzeb Hafi Makes Giant Breakthrough in Child Disability Prevention, Announces 'IRT Model'.

A cutting-edge research pinnacle demonstrated at HEC Pakistan, by UNESCO–SAARC Academic Alliance, emerges to impact lives of over 779 million disables of world.

FAIRFIELD, HAMILTON, NEW ZEALAND, December 4, 2014 /EINPresswire.com/ -- Asia, SAARC// Joint Press Release:- UNESCO–SAARC Academic Alliance, HEC, SAIRI Research Initiative Pakistan.// 12/03/2014

Despite the huge developments in 'medical measures' like vaccine-inoculations, and their massive encroachments, the past 45 years have witnessed an enormous rise in complexities of pre-birth as well as post-birth disabilities. Diverse manifolds of new 'Types & Forms' of structural as well as functional abnormalities have appeared on the medical scene. More the medical advancements claim to reach the paramount of success, more the graph of consequential complexities tends to reach the maxima of the recorded human history— the core 'underlying causality' is iatro-

teratogenecity, says research scientist Prof Aurangzeb Al Hafi, who demonstrated the first ever [IRT Model of Teratological Research](#), at Higher Education Commission of Pakistan, during the official observance of the United Nations International Disables' Day, at HEC, marked under the aegis of UNESCO.

The bench-mark research pinnacle is the 'first' scientific research model of 'teratogenesis' in the recorded history of science to date. It entails the broad-spectrum perspectives of disability prevention-before the occurrence. The ground-breaking document, that is going to change the way—the world looks at the 'phenomenon of disability', is an outcome of nearly 1.5 decades' inquiry-probings on the subject by the multidisciplinary arch-researcher Professor Qadhi Aurangzeb Al Hafi.

The revolutionary-edged investigative study monograph is primed for over 1900 universities of the globe, along with the UN agencies, the international hierarchies of legislation, policy making and the regulatory authorities, with a core focus and scrutiny into the deadly wide-spread stigma of “Iatro-teratogenesis”.

The term ‘iatro-teratogenesis’ or the iatro-teratogenicity, refers to the deadly spectacle-manifestations and pandemic out-breaks of ‘irrational medications’ that are administered during pregnancy or in lactation periods.

Notably, most of the prevalent drug-formulations are predominantly based on complex chemical-compositions, which, essentially, do pose serious threats to the physio-chemical synchrony of fetal tissues—thus, eventually leaving the

baby on severe vulnerabilities of life-long disabilities—both, structural as well as functional.

Not only are these embryonically ‘non-compatible’ hefty drug-formulations hard to be absorbed by the fetal tissues,—but also their chemical structures remain intransigently ‘tough-enough’ to be broken down and processed by the fetal cells in the same time-frame and interval-break-intermissions, as those of the mother’s body-cells.

“

Now, the collective conscience of the world, should come forth to raise voice for those, who cant raise voice for themselves—the babies, yet unborn—but, prone to life-long disabilities,—the voiceless!

*Arch-researcher Prof Dr
Aurangzeb Hafi*

During this course of ultimate ‘dis-synchrony’ in complex dynamic-interplay of chemicals, the fetal body-cells are left with no margin-latitudes other than bearing heavy toxic burdens at the very initial stages of cell-formations and organogenesis—and, ultimately persisting on worstly devastating complexities of physical and mental abnormalities.

At very core of the problem, under-lying source-reason is ‘irrational & obscured’ medication— Irrational, because—how can it be rationalized to alleviate the common-cold symptoms,

or to relieve the temporary nasal-achings or ordinary headaches of a mother at the ‘very expense’ and cost of ‘life-long disabilities’ of the baby.

And obscured, —understandably, due to the identical fact that most of the prevalent drug-compositions are, embryonically non-compatible, but nonetheless these are administered during pregnancy—because,—however, they do bear the fascinating enough ‘safety-signs’ like ‘100% secure for both, —‘the mother and the baby’ and ‘no adverse-effects noted’...etc.

“The chemical mechanism of these drugs is not that simple as publicized by these ‘allegedly false’ and massively ‘misleading safety-claims’, that are made by the corporate controllers of medical world—the pharmaceuticals’ profiteers, who use to promote these ‘silently salient genocides’ through highly crafted and ‘well-tailored’ campaigns involving 100% biased, pre-inclined research studies that are funded, predisposed and ‘course-plotted’ by the same parties, and then publicized by these ‘profiteers-backed’ media” —denouncingly points out the research-study.

“Such drugs and chemical-compositions must be brought under strict international legislation, in order to safeguard the lives of massive proportions of ‘unborn babies’, that prone to predisposal of detrimental devastations” pleads the groundbreaking research cessation.

This forth-rightly stark ‘crux’ of the devastating ‘perplex-crisis’ has been documented by the ‘IRT Research Model’, which brings forth sensitive-most questions and key-concerns to be addressed by the global hierarchies including UN, and henceforth, calls for international legislation on the subject-matter.

The IRT model and theory was demonstrated through a multi-academic scientific research colloquia, at Higher Education Commission, Pakistan. The colloquia consisted of 21-thematic orientations, 18-confluences, 11-symposia, over 19-scientific demonstrations and 5 thematic confabs.

Well-attended by academicians from all over the country, the auspicious demonstration event was presided over by the Minister of Special Education, Disables’ Empowerment and Rehabilitation Mr. Asif Saeed Manais. An assembly of high-profiled inter-disciplinary experts participated into the panel discussions and the thematic confab.

Professor-emeritus Dr. Zaki, Dr. Ashraf, Mr. Fazil Cheema, Dr. Shafiq Jallandhary, Dr. Ashraf and Dr. Sohail Zafar Cheema also expressed their deep sense of concern regarding the issue and paid salutations to the upright accomplishments of Professor [Dr. Aurangzeb Hafi](#), in the area of disability prevention.

Dr. Khalida M Khan, holder of the UNESCO chair at PU, who is also a post-doc moderator of SAARC-UNESCO alliance, presented a brief summary of the first Post DESPO report of 2014, the [KAKHTAH multiversity](#), and extended special tributes to Prof. Hafi, on the official launch of IRT model, on behalf of the UNESCO and the University of Punjab.

“By virtue of Prof. Hafi’s worthy contributions, Pakistan, now, stands on verge of becoming world’s ‘research capital’, in disability-prevention realm-orbs of scholastic academic foci”, expressed Dr. E.M. Nawaratne and Dr. Faisar N.M. in their message.

The honorable chief guest Minister Asif Saeed Manais gave his closing address and complimented the pioneering efforts made by the IRT Model’s principal investigator Professor Qadhi Aurangzeb Hafi. He further applauded the research work and the self-less dedication put in by Prof. Hafi. He ensured that all efforts would be made to make sure that the recommendations put forward by Dr. Hafi shall be implemented in true letter and spirit, and no stones would be left unturned to see that all factors that attribute to the cause of disabilities, are eradicated

The cutting-edge accomplishment is an ‘uprightly judicious’ call to the collective conscience of the world, to come forth to raise voice for those, who cant raise their voice for themselves--the disables the neglected part of the society!
