

A ROLLING-UP ELECTRIC HEATER DELIVERS HEAT WITH HIGH SAFETY BUT LOW ELECTRICITY BILL

SEOUL, SOUTH KOREA, January 29, 2015 /EINPresswire.com/ -- eSang Technologies Co., Ltd., one of leading electric heater manufacturers in Korea, introduces an innovative electric heater to make you warm and even happy in this winter.

We see many electric heaters in the world. The heaters include different types of ceramic heater, quartz heater, near-infrared, far infrared carbon heater, personal heating pad, and etc. You may ask which electric heater is the best selection to make a severe winter warm and happy winter in terms of cost and safety. But, using electric blanket or conventional electric heater against cold does not ensure a true happiness with warmth if you see so high electricity bill as three times than before or outbreak of fire.

Based on such customer's demands and concerns, eSang Technologies's (www.esangtech.com) electric heater named "Rolling Stove" has been designed as a new concept electric heater allowing you to feel warm, free from care of high electric charges and fire, and even burn.

"Rolling Stove has lower power consumption of 50% than current electric heater in same size and removes visual anxiety about red heating light from heater. Besides, it is an eco-friendly electric heater without embers to cause fire and burn as well as being operated by a smartphone with Bluetooth," said Mr. Jo, Mu Sung, CEO of eSang Technologies.

He added, "Rolling Stove's simple design fits any places like houses, offices, and malls. And Rolling Stove is very superior in terms of storage and movement since it can be easily rolled up for storage." In addition to Korea where Rolling Stove has been widely delivered by many distribution channels, the company intends to establish global distribution channels via collaborative partnerships with North American, Chinese and European firms for market expansion.

About eSang Technologies

eSang Technologies has developed and provided wireless LAN equipment since its establishment in 2003.

With its own technologies, eSang Technologies has contributed to giving shape to Korean Emblem for certifying building equipped with super high speed information communications with a long term goal to implement communication infrastructure and wireless which has currently required long-term
