

ISB Pledges To Donate Comic Relief , Save Lives n Save The Planet

Intelligent Solar Box becomes only PAYG (Pay As You Go) Integrated audio featured solution in the world. Rent to Own(R 2 O)Pre-Paid Solar Home Systems

MILTON KEYNES, BUCKS, UNITED KINGDOM, February 12, 2015 /EINPresswire.com/ -- Intelligent Solar Home System Technology provider pledges to donate part of profits for 2015/2016 to Comic Relief. This Solar home system is specially designed for developing countries being only one in the world which has integrated 4in1 audio feature (FM radio/ SD card slot / MP3 / head Phone plug) whereas other similar systems offer radio facility as self standing single unit as an optional purchase. There are over 606 million people just in Africa and over millions of people in Asia are living without energy, Using paraffin, kerosene and candles to get light during dark hours. We all know these sources are hazardous means of light, both fumes contamination and higher risk of fire in flammable wooden houses causing over 100000 deaths per year just of severe burns and smoke contamination with survivors left with medical conditions like asthma, lungs diseases etc. People living in those regions have no work so they have either very low income to afford grid electricity or difficult terrain restrictions does not allow to get power to them so most of people get local government grants or low income makes them afford not more than 3/4 USD per week on fuel budget.

Rent 2 Own (R 2 O) solar home system is user friendly,light weight,cost effective and easy to install home system with solar panel to charge intelligent Solar Box , iSBox can power up 3/4 x LED lights with 4/5 meter cable each light , USB charging port with universal 10 pin cell phone charger, 4 in 1 integrated audio device and credit top up feature with remote control, Radio besides the only source of entertainment for consumers also a traditional means of communication from government to general public for news , announcements like weather warnings, epidemic control precautions , aid distribution Schedules etc well before time. Solar panel charges the iSBox which gives DC voltage to light up small household at night using clean, 100% environment friendly and best of all safe energy with no fire threat and breathing hazard, charges cell phones and plays radio.

This unique R 2 O system enables the customer to buy credits of same budget as paraffin, kerosene or candles i.e. 3/4 USD per week to top up the iSBox with small IR remote control provided with this system this credit input is indicated via green light and iSBox is powered up, when 7 days are over the credit finishes and credit indicators turns red and unit auto shuts and stop supplying current , It's time for consumer to visits local corner shop and purchase some more credits to top up the SHS which powers its self on receipt of top up credits and this credit top up process is repeated over number of weeks or months as agreed between consumer and distributor, it can be any presigned term from 6 months to 18 months depending upon the affordability of consumer and when cost of system is paid over agreed term this system auto unlocks its self and consumer becomes owner of the SHS (Solar Home System), will not require any more credits to top up the system. It will work as normal solar powered generator for consumer.

Example;

Cost of SHS = \$ 99.99 *(T & C Apply on MOQ);

Consumer Payment = \$ 4.00 / week

No of Weeks. = 25 or 6 months

Consumer become Owner of SHS after payment is made in full over the term of approx 6 months.

This is be very effective for NGOs, social enterprises or similar organizations interested to recycle their funds for other development programmes within 6-18 months or private businesses who can sell this system on slightly higher rate and make profits in 6-18 months.

This solution is positively helping communities living in developing countries to move from unhealthy and hazardous means of light to clean and safe energy giving students opportunity to study in dark under green energy, It has been successfully tested in Zambia by US based social enterprise SVA (Shared Value Africa) and received over whelming interest in the region, SVA is in touch to sign up for exclusive rights for Zambian region.
