

FlyShark Smartwatch: The Powerful and Fully Featured Smartwatch Makes Its U.S. Debut with Kickstarter

The new FlyShark Smartwatch, invented and designed by the FlyShark Team, is the latest technological smartwatch out there. It's more than just a watch.

WASHINGTON DC, UNITED STATES, February 27, 2015 /EINPresswire.com/ -- It all began two years ago on a hot humid summer night in Shenzhen city (China), where some of the world's hottest electronic devices, like the iPhone, were manufactured. In the park of Xiaomeisha near the shore line, four bright, young, and versatile geniuses from different companies and different industries were having a party together. Little did they know, one day they would join forces together to take the world by storm with their remarkable ideas-turned-realities. Together they formed the FlyShark Team and began to tackle technological issues and solve them. Their latest venture? The new [FlyShark Smartwatch](#).

The founder of the team, Richard Wu, was fascinated by technology's ability to simplify people's lives and daily routines. He led a successful project in 2014, to redefine the [wireless keyboard](#). Now, dissatisfied by the lack of simplicity and

ease in today's class of "smart" watches, Alen Su, the hardware designer, focuses on designing the new FlyShark Smartwatch.

The FlyShark Smartwatch is a watch, mobile phone, heart rate monitor, exercise tracker, sleep quality monitor and more. With its latest capabilities and simple sleek design, the FlyShark Smartwatch is the watch to look out for!

Today's watches all claim to be "smart", but still require the help of a smartphone in order to work. Most smartwatches, including the popular Pebble smartwatch, are like small portable alarms that just notify the wearer when a call or text is being received, and are incapable of letting the user answer or

FlyShark Smartwatch

respond back directly through the watch in real time. Others really only focus on one area of expertise like fitness, such as FitBit, and thus the “smart” watch only records physical activity data or has limited features.

The FlyShark Smartwatch breaks down all those barriers. This smartwatch lets the wearer know when they are receiving a text or call and allows them to directly respond back through the watch. What’s more is that the FlyShark Smartwatch can receive/place calls independently without a phone. The team has designed the watch so people can simply place in a Micro-SIM card in order for the watch

to work. With basic functions like these, the FlyShark Smartwatch goes above and beyond - for active fitness users, it can monitor the wearers’ heart rates while also helping them to keep track of workout results.

This incredible watch even has a built-in camera, taking photos up to 2 million pixels. With its simple sleek watch face and leather wristband, and a battery life up to 48 hours, the FlyShark is perfect for any occasion.

The FlyShark Smartwatch is making its debut in North America. In order to produce and bring the smartwatch to the market, the FlyShark team is launching a [Kickstarter campaign](#). The campaign runs until the end of March 2015, with smartwatches arriving to backers around April 2015. It makes a great gift to friends and loved ones. Whether they are fitness fanatics or tech savvy people, anyone and everyone can enjoy the FlyShark Smartwatch!
