IT Governance proves that cybersecurity best practice doesn't depend on a big budget

organizations can take advantage of expert consultancy to implement ISO27001 for as little as $14,995, Thanks to IT Governance's fixed-price Packaged Solutions.

ASHLAND, OHIO, USA, March 9, 2015 /EINPresswire.com/ -- IT Governance, the leading global provider of cybersecurity solutions, says that US businesses don't need a big budget to be cyber secure.

Thanks to IT Governance's fixed-price ISO 27001 Packaged Solutions, US organizations can now take advantage of expert ISO 27001 consultancy to implement the Standard for as little as $14,995, and organizations of fewer than 20 members of staff can achieve ISO 27001 registration for as little as $7,650.

The international cybersecurity standard ISO 27001 sets out the requirements for an information security management system (ISMS), an enterprise-wide approach to data security that encompasses people, processes, and technology.

Alan Calder, founder and chief executive of IT Governance, says: "ISO 27001's risk-based approach enables organizations to implement cybersecurity best practices based on the risks they actually face, and by achieving ISO 27001 registration for their ISMS, businesses can demonstrate their commitment to cybersecurity to their stakeholders."

2014 was the worst year on record for data breaches, with an estimated one billion records compromised worldwide. North America was hardest hit, with 1,164 documented incidents – 76% of the global total – resulting in 390 million breached records. The US suffered the vast majority of these data breaches: 1,107.

These calamitous statistics have inevitably led to increasing concern among US citizens about the security of their personal data, and US businesses coming under growing pressure to secure their systems so that they don't fall victim to the next large-scale data breach.

Many organizations are buckling under that pressure and are failing to act: PwC's 2014 US State of Cybercrime Survey found that less than half of companies had taken the necessary steps to protect themselves from cyber attack.

With IT Governance's unique combination of standards, books, toolkits, software, online training, and online consultancy, IT Governance's Get A Lot Of Help and FastTrack packages provide US organizations with all they need to implement the Standard and ensure their cybersecurity.
