# New book explains how to secure your web applications

ELY , UK, March 10, 2015 /EINPresswire.com/ -- Web applications are under increasing threat from malicious attacks. According to Imperva's Web Application Attack Report 2014, there is a 10% year-on-year increase in SQL injection (SQLi) attacks and a 24% increase in remote file inclusion attacks (from 38% to 62%). These attacks also last 44% longer compared to the previous year.

Web Application Security is a Stack, a new title from IT Governance Publishing (ITGP), provides an overview of the main threats from web application attacks, helping readers to improve their cyber defences.

The book is an ideal companion for application developers, system administrators and network professionals who need a comprehensive top-level view of web application security to better defend and protect both the 'web' and the 'application' against potential attacks.
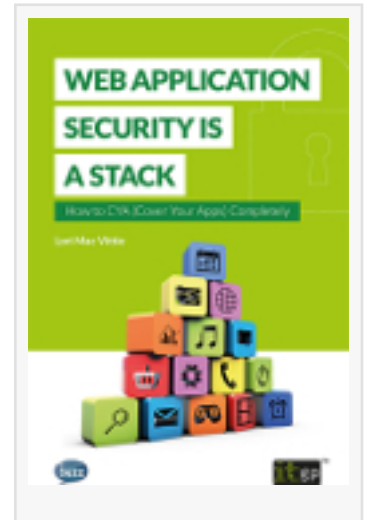

Web Application Security is a Stack is available from IT Governance in multiple formats (including softcover, Adobe eBook, Kindle and ePub):

www.itgovernance.co.uk/shop/p-1688.aspx (International)
