The demulsifier market is mainly driven by the increase in crude oil production. This increase is due to rising global energy demands. Major factor restraining the market is the stringent environmental regulation in the European region. The regulation restricts the use of toxic organic chemicals for demulsifier manufacturing. The opportunities for the demulsifier producers lie toward the discovery of new oil fields which would result in higher crude oil production. Long-term opportunity lies in the use of green demulsifier, which are manufactured using environmentally acceptable chemicals.

Crude oil is the major application of demulsifier followed by petro refineries. Crude oil application drives the demulsifier market all across the globe. The Middle East region dominated the demulsifier market for crude oil, followed by Europe and North America. The crude oil application is projected to witness the highest CAGR of 3.8% between 2015 and 2020. In the short-term, crude oil production from shale reserves in the U.S. is expected to drive the market while in the medium and long-term; the Middle Eastern oil producing nations are expected to witness a steady growth.
