

Entertainment Experience LLC First Achieves Multi-Million Unit Month - Reaches Over 3 Million Shipped Milestone

3.25 million units within 9 months of initial launch validates EE's technology, market strategy and flexibility in working with customers

ST. AUGUSTINE, FL, USA, March 18, 2015 /EINPresswire.com/ -- [Entertainment Experience LLC](#) announced today that over 2 million laptop computers preinstalled with its eeColor software were shipped between February 16, 2015 and March 6, 2015 and that the total number of units shipped now exceeds three million units.

"This is another significant milestone for us as we continue to make our technology available to more Original Design and Manufacturing organizations and the Brands they serve" said [John Parkinson](#), CEO of Entertainment Experience. "The technology we have developed and integrated into a range of devices makes any display technology look better and can save power, extend display life and give users unprecedented control over how images and videos are displayed. These features, together with ease of use and simple integration into the device manufacturing process are driving the acceleration of our technology into the marketplace. Reaching a shipment volume of 3.25 million units within 9 months of our initial launch validates our technology, market strategy and flexibility in working with our customers."

The eeColortm processing model can be used for any current or future display technology, with any color gamut capability, including the new generation of Ultra High Definition (4k) displays and the increasingly popular Pentile display panels and AMOLED displays. The result is highly accurate colors without the artifacts that were typical of previous color management and color correction methods.

"What is especially groundbreaking about our design is that it is implemented in software, so there is no additional hardware cost involved, minimal power penalty when running and we are able to easily keep up with the rapidly evolving processing capability of current and future graphics processors and display technologies, working across many different vendors' devices," said Parkinson.

eeColortm customers already include top global Original Design and Manufacturing companies and the brands for whom they work, and implementations are available for DirectX11 (on Microsoft Windows) Android and iOS devices. Attractive licensing terms are available to all ODMs.

About Entertainment Experience

Entertainment Experience, LLC, was established in 2008 with a global focus changing the cost and value performance of digital entertainment solutions in homes. With the evolution of technology, it now travels with us. The company has seen a need to broaden its scope to look into optimizing all sorts of digital entertainment solutions. With its eeColor technology, EE has been creating solutions for all sorts of technology to adapt with the human eye-brain connection to process and project images in a similar, optimal manner. With their unique ability to provide the most affordable and highest quality color and visual experience on the market today, EE is on the fast track to provide and offer a

premium viewing experience with all sorts of technology to users.
