consulting firm, provides market shares and forecasts in the service provider equipment space, business modeling and TCO/ROI consulting services, service creation, strategic messaging and go-to-market strategies in managed all aspects of the networking industry.

Elias Aravantinos will extend ACG Research’s strong presence in the service provider space by bringing his extensive multidisciplinary background and experience in technology marketing and management consulting for large vendors and Wall Street firms in [wireless infrastructure](#) and mainly into the service mobility and WiFi segments for both ACG’s Europe and North America operations.

Mr. Aravantinos will be responsible for ACG’s service provider mobility division, delivering consulting and analysis for end-to-end mobility infrastructure, services and emerging business models. His professional experience includes working for KPMG where he lead an Identity Management Applications and Services, securing the company’s extranet; Lucent Technologies Lab where he designed a dynamic allocation spectrum model for the next-generation wireless networks, applying computational economics and optimization models; Columbia Institute for Tele-Information leading a strategic consortium of operators to understand the ultra-broadband network and the technology requirements to develop a set of wireless and wireline solutions. During the last five years, he has developed extended expertise into wireless technology projects, as well as microwave and mobile backhaul.

Elias is a pioneer in technology and business-related indexes and helps service providers and technology managers to understand the present and future trends. “Operators and SPs are challenged today, as there is a tremendous need for in-depth research and strategic analysis across various wireless technologies that form a very demanding and dynamic ecosystem,” says Elias Aravantinos. “I look forward to helping them address these issues and am really excited to be part of a strong team of thought leaders that will complement my passion, vision and expertise across different technologies.”

“As capex shifts more toward wireless, operators are looking for the best services and innovative architecture to not only reduce churn but also to increase profitability, says Dr. Ray Mota. Having Mr. Elias Aravantinos who has expertise in the technology and business side of mobile and wireless technologies, will help ACG Research provide comprehensive services to MNOs and vendors as well as complement their requirements as they look to state-of-the-art service creation and business case

analysis in areas of 5G, VoWiFi, VoLTE, backhaul and other wireless areas.”
