

# Condoms May Fail to Protect Against HPV; CBCD Reviews Medical Evidence

*HPV can be transmitted even when a condom is used.*

ROCHESTER, NEW YORK, UNITED STATES, April 19, 2015  
/EINPresswire.com/ --

“Infected with the human papillomavirus (HPV)? We recommend taking [Novirin](#) or [Gene-Eden-VIR](#).” – Greg Bennett, CBCD

The human papillomavirus (HPV), which causes genital warts and some cancers, can still be contracted by both men and women even when condoms are used. According to Dr. Michael Abrahams, the risk of transmission of HPV is greatest without a condom, but the virus can still be transferred from one person to the next without physical penetration.

“Suppose a man has warts and very small lesions on his scrotum and he puts on a condom, the condom is not going to cover his scrotum so he can still have genital contact.” (1) The doctor continued, saying that “one of the worst cases of genital warts he has seen is on a virgin who engaged in foreplay with her boyfriend.” (1)

The CBCD recommends helping the immune system to target the latent HPV virus that causes genital warts with Novirin or Gene-Eden-VIR.

The formula of these natural antiviral products was tested by Hanan Polansky and Edan Itzkovitz from the CBCD in two clinical studies that followed FDA guidelines. The studies showed that the

Novirin and Gene-Eden-VIR formula is effective against the HPV and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with the HPV...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (2)

The study authors also wrote that “we observed a statistically

Both products can be ordered online on the Novirin and Gene-Eden-VIR websites here:

and

<http://www.gene-eden-vir.com>

Novirin and Gene-Eden-VIR are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

It is important for the public to realize that “Contrary to popular belief, condoms provide very little protection against skin-to-skin contact transmissible diseases such as HPV.” (3)

Dr. Abraham’s also noted that “Most people who have genital HPV don’t know they have it because there are often no symptoms, and it goes away on its own without causing any serious health problems. It is estimated that more than 75 per cent of women and men will have this type of infection at one point of their lives.” (1) The virus usually affects young women and men who are in their late teens and early 20s.

What Treatments are Available for Genital Warts?

“There are no drugs approved against the HPV. Current treatments include procedures, such as cryotherapy, conization, and the Loop Electrosurgical Excision Procedure (LEEP). These procedures use liquid nitrogen, a surgical knife (scalpel), a carbon dioxide (CO2) laser, or electrical current to remove the abnormal growths caused by the HPV. These growths include cells that harbor the active virus. The procedures do not target cells with the latent virus. Since they do not remove the latent virus, these procedures only produce a temporary remission.” (2) In contrast, Novirin and Gene-Eden-VIR were designed to target the latent HPV, and were shown to reduce HPV symptoms in two separate post-marketing clinical studies that followed FDA guidelines.

The CBCD therefore recommends that HPV infected individuals take Novirin or Gene-Eden-VIR.

All orders of Gene-Eden-VIR and Novirin are completely confidential, and no information is shared or sold to any third party. Privacy is assured.
