

Peru Grants Wave Energy Go-Ahead to Atmocean

Atmocean has received final authorization to demonstrate its wave energy system set to launch June 2015.

ILO, PERU, May 14, 2015

[/EINPresswire.com/](http://EINPresswire.com/) -- The Peruvian Navy has officially signed off on permitting which grants Atmocean a one-year license to demonstrate its [wave energy](#) technology in ILO, a coastal city of 100,000 population located in southern Peru. Atmocean will deploy a system consisting of five connected seawater pumps by early June, leading to the potential installation of full commercial systems by the end of 2015. Chris White, Atmocean's Project Manager said "It is all very exciting for us as this demonstration will not only show that [Atmocean's technology](#) works as designed, but prove our system's advantages in cost, manufacturing, deployment, durability, and retrieval." White further stressed the importance the permit conveys in establishing Latin America as a leading market for wave energy applications, including desalination and renewable power. "Peru has shown great leadership here. With over 2,400km of coastline, most of which has great wave action, the [potential market size](#) for this renewable energy source is huge and it does not begin to cover the story of Chile located to the south."

The Atmocean system operates by sending pressurized seawater to onshore turbines to generate power, or to provide desalinated fresh water. Atmocean CEO Phil Kithil believes this broader range of products will allow Atmocean to serve a range of community needs. "With power and fresh water, we'll have the ability to serve municipalities, agriculture, and industry, creating jobs without using fossil fuels, and securing a sustainable way of life for years to come." The company based in Santa Fe, New Mexico USA, has set up a Peruvian subsidiary as a vote of confidence in the tremendous opportunity available in Latin America and Peru. More information can be found at Atmocean's website.
