

# New technologies and revenue generating solutions for Parking Facilities

*SMART PARKING CONFERENCE – 28-29 Sept - Sheraton Grand Hotel, Dubai, UAE*

DUBAI, DUBAI, UNITED ARAB EMIRATES, May 19, 2015

/EINPresswire.com/ -- Dubai, UAE –

'Recent estimates suggest that there are 10 billion people in the world, and 1 in 10 has a car. That makes over 1 billion personal vehicles in the world. Planners have estimated that each vehicle requires an average of 8 parking spaces

to function as a successful transportation mode, as a consequence, it is estimated that there should be 9.2 billion parking stalls to service them. Modern cities generate a need for 10,000 non-residential public parking stalls per million population' - from Middle East & North Africa Parking Association website/GulfTraffic.

As the population and tourism industry in the UAE continues to grow and the number of large-scale events held in the country also continues to increase, the requirement for adequate car parks and parking facilities is increasing exponentially.

With this indispensable need in mind, Advanced Conferences & Meetings will launch '[Smart Parking UAE](#)' conference on 28 -29 Sept, at the Sheraton Grand Hotel, Dubai.

Dedicated to supporting the development of the parking industry in the UAE, Smart Parking UAE is a brand new specialized conference exploring the design, optimization and management of car parks and parking facilities in the UAE.

Smart Parking UAE will explore the design and construction considerations of car parks and parking facilities, as well as the new smart technologies which can lead to the optimization of these facilities for both the end-users and their operators, bringing together the designers, contractors, materials and technology providers with building and community owners and managers, event organizers and other car park and parking facility operators.

Smart Parking UAE has a large scope to cover the master planning considerations surrounding the increasing population, design and construction of permanent car park facilities and the new technologies which are facilitating 'automated' car parks and the optimization and revenue generation opportunities of car parks and parking facilities for building, property and community owners and managers.
