

Empirical Foresights Announces New Research, Data and Technology Products

These featured product and services include "Objective Outlook" research reports, "Data Significance" indexes and "Inference Maven" suit of IT solutions.

MUMBAI, INDIA, May 26, 2015 /EINPresswire.com/ -- Global research and advisory firm Empirical Foresights is creating new product and services to empower the decision-makers.

[Objective Outlook](#) research report series will help in identifying the external forces that can affect factors like consumer demands, product & services value-chains, financing availability & commitment, business & policy priorities. Each report will provide content organised by various categories covering recent developments, background analysis of issues and projected implications.

[Data Significance](#) indexes will be produced as a set of self-contained series designed to deliver definitive information about respective topics. The indexes will contain several iterations of value-addition to the raw data and will be organised based on various classification categories.

[Inference Maven](#) suit will include components like data cleaner, consistency checker, model maker, research analyzer, linkage discoverer, knowledge builder and value predictor.

"Rapid and continuous evolution of our business, economic, social and technological systems means that it is becoming increasingly difficult & costly to keep track of them. As a result, the organisations & decision makers end up playing the catch up rather than shaping and guiding the systems." says Abhay Gupta, Chief Economist based at company's Vancouver office. "Three components; data, codified intelligence & validated conclusions; form the basis of our projections and recommendations. Our products and services benefit businesses, research institutes, government departments, investors, multi-national corporations and decision-makers in other settings."

About Empirical Foresight:

We enable organizations to improve productivity, overcome constraints and develop resilience by using data-driven analysis, forward-looking ideas and efficient guidance.
