

# Liposuction And Cosmetic Surgery Institute Of Chicago Offers Breast Augmentation By Fat Injection

*This natural form of breast augmentation in Chicago uses the patients' own excess fat and is available at all four of the Institute's Chicago-area locations.*

CHICAGO, IL, USA, June 26, 2015 /EINPresswire.com/ -- The [Liposuction and Cosmetic Surgery](#) Institute of Chicago is now offering breast [augmentation by fat injection](#) for women who do not want the traditional saline or silicone breast implants in Chicago. The procedure fills the patient's breasts using her own natural fat cells for permanent breast enhancement.

"This is a single, outpatient procedure that is ideal for women who don't want implants and have a little excess fat they'd like removed from other areas of the body. The entire process takes only 1-2 hours and can increase breast size by 1-2 cups, the results are permanent, and the breasts feel completely natural; they are just fuller than they were prior to the procedure. It usually only done once, but a patient can have it done again at a later time if she wants to increase her breast size even further," explained Leslie Forrester, R.N., B.S.N.

After a thorough breast exam to determine suitability for the procedure, patients select an area from which to have fat removed. Unwanted fat is removed via liposuction, treated so that stem-cell rich fat cells are separated from the extracted fat, and then those same fat cells are injected into the breasts via two small, inconspicuous incisions. The procedure typically results in 10 ounces of fat being injected into each breast, but larger amounts are possible.

"The procedure is fairly simple. Downtime is minimal and it does not require a hospital stay. It can be done under general or local anesthesia and the patient will be back to her usual activities within 1-2 days. What women like most about it, is the fact that it is a natural alternative to implants, using their own fat cells," said [Dr. Leon Tcheupdjian M.D.](#), Founder/Medical Director Liposuction and Cosmetic Surgery Institute, Chicago (<http://www.lipodoc.com>).

Breast augmentation by fat injection is not a breast lift and will not fix sagging breasts. It is used to enhance the size and shape of breasts. Other than some temporary bruising, swelling, and the associated minor discomfort, there are no side effects or risks with the procedure.

Free consultations on breast augmentation in Chicago are available at all four of the Institute's locations: Chicago's Gold Coast, Arlington Heights, Naperville, and Oak Brook. Visit [www.lipodoc.com](http://www.lipodoc.com) to learn more about the Liposuction and Cosmetic Surgery Institute's surgical and non-surgical breast enhancement procedures.
