

PopChar Win 7: Find characters by drawing their shapes

Ergonis Software today released PopChar Win 7.0, a major new version of the company's award-winning tool for exploring fonts and inserting special characters

PERG, AT, AUSTRIA, July 21, 2015
/EINPresswire.com/ -- FOR IMMEDIATE
RELEASE:

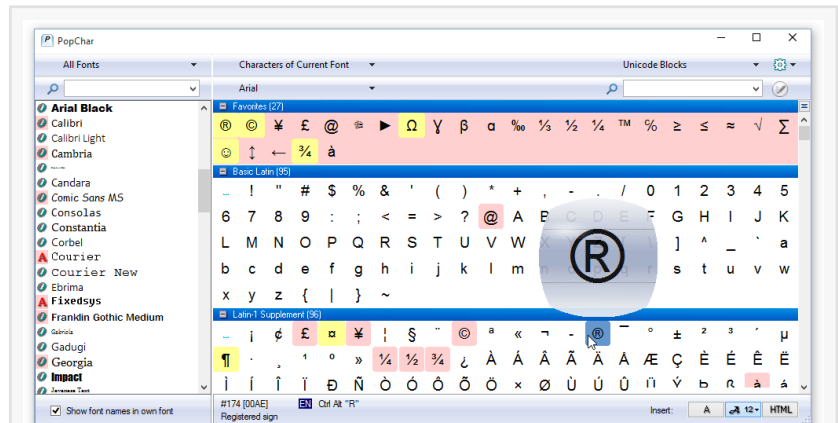

PopChar Win 7: Find characters by
drawing their shapes

Perg, Austria: July 21, 2015 - Ergonis
Software today announced PopChar Win
7.0, a major new release of the
company's award-winning tool for
efficiently [exploring fonts](#) and [inserting
special characters](#) on Windows.

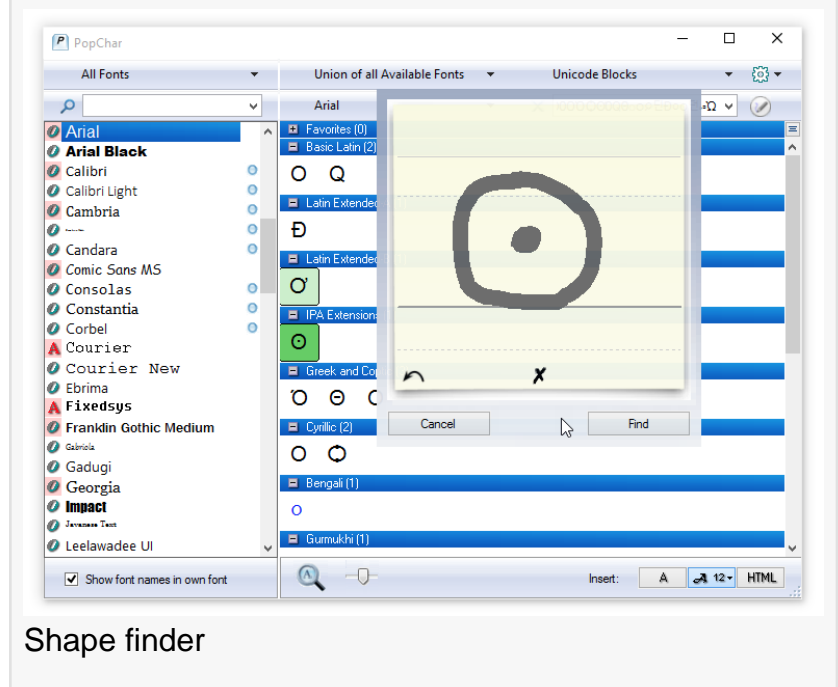

Since 1987, PopChar has been the best-
known and highly acclaimed tool for
finding and inserting special characters
on the Mac. Since 2004, PopChar is
available also on Windows. With
PopChar, inserting any character is as
easy as clicking it in the PopChar table,
and you can even search large fonts for
characters by their Unicode names.
Unfortunately, you often don't know the
Unicode name of the desired character,
so you don't know which search terms to

enter. But you do know what the desired character looks like. With PopChar 7, you can now simply show PopChar what you want.

PopChar 7 introduces a new "Shape Finder", which allows you to draw the shape of a character on the screen to tell PopChar what you are looking for. You just draw the approximate shape and click the Find button and PopChar comes up with all characters that resemble this shape. It has never been easier to find special characters, even in Unicode fonts with thousands of characters. The Shape Finder can also be used with PopChar's new "Find Similar Shape" context command, which allows you to start with a character in the table, optionally add a few extra strokes, and quickly [find characters that look similar](#).

Find special characters

Shape finder

PopChar 7 also adds a new font filter for limiting the font list to fonts that match a given substring, it can export and import the favorite characters to and from a text file, and offers a new window layout with a permanently visible font list.

Many more improvements and enhancements are included in this new version. Visit Ergonis Software's website <http://www.ergonis.com/products/popcharwin> to view the complete list of changes contained in this release and to download a trial copy.

PopChar solves a problem faced by every technologist and multi-lingual worker. Inserting special characters into application documents can be frustrating and results in a steady loss of productivity. With PopChar, thousands of special characters are only a few clicks away. Just pop up the PopChar window,

Font sheet

click the desired character, and the character appears in your current document right away. Web designers especially will enjoy the ability to insert HTML symbols.

Availability and Ordering:

PopChar Win 7 runs on XP, Vista, Windows 7, Windows 8, and is prepared for Windows 10.

PopChar Win can be purchased securely on the Ergonis online store at <https://store.ergonis.com>. The upgrade to PopChar Win 7.0 is free for anyone who purchased a license for PopChar Win 6 on or after October 1st 2014. Upgrade paths are available for customers who purchased their license before that date. For information about purchases, including enterprise licenses, volume discounts, and upgrade pricing offers, see the company's web site.

About Ergonis Software:
