

Herpes in the Throat, What are the Signs?; CBCD Reviews the Medical Evidence

Symptoms can include burning, extreme difficulty swallowing, severe throat pain, upper chest pain when swallowing, and more. (1)

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, July 29, 2015 /EINPresswire.com/ --

“Infected with the herpes virus (HSV-1, or HSV-2)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#).” - Greg Bennett, CBCD

Most people do not realize that the herpes virus can infect the throat, and cause severe problems. Moreover, they don't realize that both HSV-1 (usually the oral herpes virus) as well as HSV-2 (usually the genital herpes virus) can both infect this area. When this happens, “herpes of the throat usually appears in the form of painful, fluid-filled blisters that eventually rupture into sores. Symptoms can include burning, extreme difficulty swallowing, severe throat pain, upper chest pain when swallowing, fever, chills and (if left untreated) weight loss. Herpes lesions can be difficult to distinguish from other throat sores, and may be misdiagnosed due to their rare occurrence. Patients do not usually have other herpes sores around their mouth or lips at the same time of the throat outbreak, making diagnosis that much more difficult. A throat culture or biopsy is often required.” (1)

The Center for the Biology of Chronic Disease (CBCD) recommends that

infected individuals take Novirin or Gene-Eden-VIR, which have a natural, antiviral formula that was shown to effectively reduce herpes virus symptoms in two separate post-marketing studies that followed FDA guidelines.

studies showed that the Gene-Eden-VIR and Novirin formula is effective against the family of herpes viruses, including HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, "individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR." (2) The study authors also wrote that, "we observed a statistically significant decrease in the severity, duration, and frequency of symptoms." (2)

Both products can be ordered online on the Novirin and Gene-Eden-VIR websites, here:

<http://www.gene-eden-vir.com>

or

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

"For people with well-functioning immune systems, esophageal herpes usually runs its course naturally in a matter of three to five days. In others, it may take longer. Herpes esophagitis can also be treated with antiviral medication, though in severe cases, intravenous acyclovir may be recommended." (1)

What treatments are available for herpes infections?

"Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day." (2). There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

"We recommend that individuals concerned about a throat infection with the herpes virus (HSV-1 or HSV-2), take Novirin or Gene-Eden-VIR against the latent virus." – Greg Bennett, CBCD
