

High Resolution Satellite Company Offers Images For Environmental Monitoring Campaigns

Satellite Imaging Corporation Helps Companies Discover More From Above

HOUSTON, TX, USA, July 29, 2015 /EINPresswire.com/ -- For many companies, understanding what's happening on the ground now means the difference between starting a project and losing thousands of dollars in the wait.

[Satellite Imaging](#) Corporation hopes to address that problem with their environmental monitoring imagery available now.

A Closer Look at the Truth

Environmental monitoring is more necessary than ever today. From the need researchers often have to look at the changes in a given area to the needs of mining companies to meet compliance regulations, Satellite Imaging Corporation offers the specialized data required for any environmental monitoring campaign.

"We offer image data at different spatial, spectral, and temporal resolutions by using the right combination of bands to bring out the features most pertinent to a customer's project," said Leopold Romeijn/President & CEO. "For our clients, that means expanded opportunities for monitoring and assessment at every possible level."

Their technology offers a high degree of resolution too, often coming in at 0.5m or better, and their multispectral sensors can offer increased resolutions to further and better analyze the area.

Increasing Potential

Satellite Imaging Corporation recognizes the increased potential for this technology, both inside the corporate world and out of it.

"The needs of the world are changing fast, and as populations grow and boost their economies, this is only going to become more relevant. Applications like environmental planning aren't going to be it for our environmental monitoring program."

Satellite Imaging Corporation also sees potential applications within disaster response, public health, forestry, and agricultural biodiversity conservation, as well as a number of corporate applications.

Satellite Imaging Corporation offers the specialized data required for any environmental monitoring campaign.

The ability to do more, means understanding the world around you at every level, and Satellite Imaging Corporation is working to help make that possible now.
