

# Nexcopy introduces Time Expiration for USB Copy Protection

*Nexcopy can now restrict users from viewing files after a specific date and time on their USB copy protected content.*

LAKE FOREST, CA, USA, July 31, 2015 /EINPresswire.com/ -- Lake Forest, CA -- August, 2015 -- [Nexcopy Inc.](#), introduces time expiration for copy protected files on Copy Secure USB media. The cross platform copy protect solution which supports both Macintosh and Windows computers will restrict and deny access to files after a specific expiration date is set by the content owner.

USB Copy Secure media offers the follow time expiration features:

- Select individual files to expire at specific times
- Select directories to expire at specific times
- Select an entire project, with all content, to expire at a specific time

"Our copy protection is second to none," says Greg Morris, President of Nexcopy Inc. "we talk with customers all day long about the features we offer, and they are blown away." Morris continues, "For years, Nexcopy has offered copy protection which is a solution that works on both Macintosh and Windows computers. We get calls every day asking about our solution. Everyone comes to us because the competition offers data encryption, not copy protection. Encryption is a total different solution and is something most users are not looking for."

“

Everyone comes to Nexcopy because the competition offers data encryption, not copy protection. Encryption is a total different solution and is something most users are not looking for.

[Copy Secure media offered](#) by Nexcopy is a hardware and software based solution. The solution gives a content owner the ability to let others see their information, but that user

cannot save, print or share the files which are copy protected. The most recent feature, and the reason for this press release, is the ability to assign expiration dates to the copy protected files.

Morris continues, "Our time expiration feature is truly fantastic. The time and date stamp follows the

USB Copy Protect Flash Drive

drive and even if a user tries to back-date their computer, it won't get past our copy protection. We put a lot of hard work into making sure our expiration times are true and can stand up to those trying to break our copy protection scheme. This is a 100% stand-alone solution which runs entirely from the flash drive, there is no installation of software, no Administrator rights required to use the drive, it's a completely self-contained solution."

The Nexcopy copy protect solution is much more than encryption. With our copy protection the files are encrypted and scrambled. The files will decrypt and display only when running from our flash drive. The copy protected content will play on both Macintosh and Windows computers, and best of all, the USB drives are write protected at the controller level so it's impossible to format or delete the information off our Copy Secure drives.

The Copy Secure media is available in USB 2.0 and 3.0 technologies and range in gigabyte capacity from 2GB through 64GB. The content owner can use the Nexcopy data loading wizard software for duplication of three drives at a time, or increase production with a Nexcopy USB200PRO duplicator unit and copy 20 targets at a time.

Copy Secure media may be purchased with inkjet printable clips for full color printing through the Nexcopy [USB7P](#) printer. The USB Clip Printer is an exclusive inkjet printing technology developed by Nexcopy for USB flash drive printing.
