

KryptAll™ PROVIDES SECURE CALLING!

BEVERLY HILLS, CA, USA, August 11, 2015 /EINPresswire.com/ -- [KryptAll™](#) releases their latest version of the K iPhone that ensures your phone calls are not made public. Using a patent pending solution that provides encryption from the user's KryptAll™ phone, calls can be made to regular phones throughout the world or other KryptAll™ phones with end to end encryption. The KryptAll™ method was designed for the business traveler to eliminate the need for both parties of the conversation to have encryption devices when the KryptAll™ user is the target of interception. Employing open source 256-bit AES encryption methods, KryptAll™ guarantees the telephone call cannot be monitored when the user is the target of interception.

KryptAll™ starts with a hardened iPhone and operates over the WiFi or GSM data network throughout the world wherever broadband service is available. The call is encrypted and your privacy is further enhanced without a record of the call. No longer can your contacts be disclosed from your calling records. Keep your privacy with the KryptAll™ secure communication solution.
