

Dentists: Talk to Your Patients about HPV and Oral Cancer; the CBCD Examines Dental Protocols

Having a comprehensive plan to educate dental patients about HPV and oral cancer is a growing need. (1)

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, August 17, 2015 /EINPresswire.com/ --

“Infected with the human papillomavirus (HPV)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#).” - Greg Bennett, CBCD

There is a growing need to educate patients about the association between HPV and oral cancers. According to a report, dental professionals rarely discuss HPV related oral cancers with their patients. (1) This is despite the fact that, “in medical centers across the United States, HPV is now responsible for more than half of all oropharyngeal cancers diagnosed. According to the Oral Cancer Foundation, HPV is now the leading cause of all oropharyngeal cancers.”(1) The Center for the Biology of Chronic Disease (CBCD) therefore recommends that individuals ask their dentist or oral hygienist if they do oral cancer screenings. Additionally, the Center recommends that infected individuals take Gene-Eden-VIR or Novirin to help the immune system target the latent human papillomavirus. The formula of these natural antiviral products was shown to safely and effectively reduce symptoms associated with HPV in two separate post-marketing clinical studies that followed FDA guidelines.

Research shows that worldwide rates of oral HPV infection and resulting head and neck cancers are rising. Dr. Forte and colleagues wrote in a study that “recently, human papillomavirus (HPV) infection has been causally associated with a subset of head and neck cancers, particularly oropharyngeal cancer.” (2) Dr. Forte and colleagues are from the Canadian

oral and oropharyngeal cancers are harder to discover than tobacco related cancers because the symptoms are not always obvious to the individual who is developing the disease, or to professionals that are looking for it.” (3)

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD in two clinical studies that followed FDA guidelines. The studies showed that the Novirin and Gene-Eden-VIR formula is effective against the HPV and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with the HPV...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (4) The study authors also wrote that “we observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (4)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses.

To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims. Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

Even though oral HPV symptoms can be hard to recognize, if you notice any of the following, a trip to the doctor is recommended: “It could be a sore spot on the gum, or cheek, or on your tongue. Is it a red patch? Is it a white patch? Is it an ulcer that's just not healing ... most bumps or sores in the mouth are not cancer, but if you notice any changes in your oral health tell your dentist, especially if the problem doesn't go away.” (5)

Are there treatments available against the HPV?

“There are no drugs approved against the HPV. Current treatments include procedures, such as cryotherapy, conization, and the Loop Electrosurgical Excision Procedure (LEEP). These procedures use liquid nitrogen, a surgical knife (scalpel), a carbon dioxide (CO2) laser, or electrical current to remove the abnormal growths caused by the HPV. These growths include cells that harbor the active virus. The procedures do not target cells with the latent virus. Since they do not remove the latent virus, these procedures only produce a temporary remission.” (4) In contrast, Novirin and Gene-Eden-VIR were designed to target the latent HPV.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies showed that their formula decreases symptoms in infected individuals. Specifically, the

formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce HPV symptoms. Additionally, it was designed to help the immune system target the latent virus.

All orders of Gene-Eden-VIR and Novirin are completely confidential, and no information is shared or sold to any third party. Privacy is assured.
