

Satellite Imaging Corporation Remains Leader In Geospatial Satellite Imagery Solutions

After 3 Decades in the Industry, GIS Leader Continues to Innovate

HOUSTON, TX, USA, August 26, 2015 /EINPresswire.com/ -- The need for high resolution satellite imagery and increased number of multi spectral bands is increasing, and [Satellite Imaging Corporation](#) remains the best provider of that data on a global level for clients with a variety of needs.

A Long History of Service

Initially founded in 1985, Geodetic Positioning Service (GPSI) and since 2001, Satellite Imaging Corporation provides services to the natural resources, engineering/construction, environmental and many other industries. Today, though, it's a very different picture because of better position accuracy and resolution such as the WorldView-3 Satellite sensor from DigitalGlobe, satellite imagery is becoming more important and critical across industry lines today. From the demand for it in Hollywood's biggest blockbusters to the need for it in city planning projects, the technology is necessary to almost every move people make today. This is where Satellite Imaging Corporation shines so brightly.

"For more than three decades now, we've been providing high quality, precise work that meets the needs of a variety of clients. We're continually working to expand our services to help ensure our clients get exactly what they want with every call and continuing consultancy," Leo Romeijn - President.

Satellite Imaging Corporation has handled a variety of projects to date including oil & gas exploration and development, pipeline planning, railroad route design, geographical information systems ([GIS](#)), digital elevation models (DEMs) and environmental monitoring.

The Satellite Imaging Corporation Difference:

While some companies simply offer an image, Satellite Imaging Corporation goes much further by providing geodetic, mapping and remote sensing consultancy at no additional cost. They've built a long reputation on quality and precision, and they pride themselves on impeccable accuracy and image quality.

"We know that those tiny inaccuracies on a project may end up costing you more in the long run," said Leo Romeijn. "As a result, we've refined our quality control processes to ensure everything is perfect from the outset. We only use the highest quality technical and academic personnel, and the high resolution satellites we use are second to none."

The company offers a variety of Geospatial and mapping services and deliver 3D terrain models

Satellite Imaging Corporation (SIC) combines orthorectified satellite image mosaics with extracted vector and client-supplied attribute data to create single, data-rich images for GIS and other mapping applications to achieve a multi-layered results.

and GIS projects to help ensure clients get the accurate view of terrain conditions necessary to move forward.

"With any client, our work starts with a needs analysis. We can handle anything from retrieval of imaging data to the final image processing and spectral analysis, so we extensively interview all of our clients to learn more about the level of accuracy and analysis they need most," said Leo Romeijn.
