

The Herpes Virus Can Infect the Liver and Cause Hepatitis; The CBCD Examines the Medical Evidence

Hepatitis caused by the herpes simplex virus is a potentially fatal disease. (1)

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, August 31, 2015 /EINPresswire.com/ --

“Infected with a herpes virus? (HSV-1 or HSV-2?) The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#).” Greg Bennett, CBCD

There is a disease called Herpes (HSV) hepatitis where the herpes virus infects the liver. This is a potentially fatal disease if not diagnosed and treated early. Medscape states that “Typically, the clinical course of HSV hepatitis is rapid, relentless, and usually fatal.” (1) A review of the medical literature found “a mortality rate of 81%; of cases reported between 1969 and 1980, 88% were fatal, and of cases reported from 1981 to 1989, 78% were fatal.” (1) Additionally, it is important to note that Medscape also says that there have been “many cases reported in healthy individuals...” (1) The Center for the Biology of Chronic Disease (CBCD) recommends that individuals infected with the herpes virus take Gene-Eden-VIR or Novirin against the latent HSV. The formula of these natural antiviral products was shown to reduce symptoms associated with the herpes virus in two separate post-marketing clinical studies that followed FDA guidelines. Moreover, the formula was designed to help the immune system target the latent form of the virus.

The formula of Gene-Eden-VIR and Novirin was tested by

HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (2) The study authors also wrote that, “We observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (2)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin shares the same formula as Gene-Eden-VIR. The difference between the two is that Novirin has higher quality and more expensive ingredients.

The CBCD believes it is important to realize that “no controlled clinical trials exist for antiviral therapy in herpes hepatitis, though anecdotal reports document successful therapy with intravenous acyclovir. Fatalities have also occurred when acyclovir was used, though usually administration was late in the clinical course.” (2) In other words, antiviral therapy seems to be effective, but is not completely effective in preventing death. The CBCD therefore recommends that individuals who know they have a herpes infection take Gene-Eden-VIR or Novirin while the virus is in a latent state (a state similar to sleeping or dormant). Reducing the numbers of latent virus may reduce the likelihood that the herpes virus will reactivate, or “wake up” and attack the body ... potentially leading to a case of herpes hepatitis.

What treatments are available for herpes infections?

“Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day.” (2) There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

“We recommend that individuals who are infected with a latent herpes virus, take Gene-Eden-VIR or Novirin.” – Greg Bennett, CBCD
