

# School Teacher comes up with the next big thing in cell phones lying in bed, pregnant with a broken foot

*A School Teacher invents the next big thing in cell phones while lying in bed with a broken foot, 7 months pregnant and launches to the world.*

PHOENIX, ARIZONA, UNITED STATES, August 28, 2015 /EINPresswire.com/ -- Miranda is a teacher and married mother of two wonderful boys. The story of her invention the "[Holding Cell](#)" began 6 months ago when she was waddling around 7 months pregnant. Somehow she missed a step and fell down pretty hard. Luckily the baby was fine but she was not so lucky, she ended up breaking her foot and ankle. Unfortunately, Miranda was put in a cast and on bed rest for 5 weeks. Although she needed a lot of help there was one thing that she constantly needed, that was to find her cell phone that had fallen out of reach & have her charging cord picked up off the floor. It was at that moment lying in bed pregnant with a broken foot that it came to her why doesn't someone invent something to keep your phone or baby monitor close by and convenient while holding the charging cord off the floor? She started searching all over and could not find anything like that available to buy so that is when she went to work trying to solve those

**The Holding Cell**

**SLIDES RIGHT UNDER THE MATTRESS**

**CONVERTS TO ATTACH TO ANY WALL**

**With a Charging Cord Holder so it is never on the floor!**

problems. And that is when the Holding Cell was born! The Holding Cell is simple to use and can be mounted beside the bed by sliding the panel under the mattress so your phone is within arm's reach, perfect for cell phones and baby monitors. Wherever the user puts it, this handy storage unit will adjust in size to fit any phone or device. The charging cord is safely captured through slots in the bottom to keep it from being lost, and there is even extra storage space for additional cord. The unit can be angled to allow for easier viewing of a phone's screen, and folds neatly away when not in use. The Holding Cell provides the perfect place to store a phone, baby monitor or other electronic device during the night or any time the user needs a safe and easy-to-access storage and charging solution so your charging cord is never on the floor.

As seen at <https://www.kickstarter.com/projects/2110690770/the-holding-cell-a-game-changing-phone-holder-for>, the Kickstarter campaign offers pledge levels from \$5 to \$300 and awards ranging from free links to ambient sounds to assist in sleeping to Holding Cell Units and additional USB charging cords. For more information on the prizes associated with various pledge levels, see the Kickstarter page.

About The Holding Cell:

The Holding Cell is a unique device that is designed to work in any location and to safely hold a personal electronic device while it charges. The Holding Cell creators have now launched a

Kickstarter campaign to raise production and distribution funds.
