

New Features for WordPress Spam Protection

CleanTalk company pleased to inform you that we have made a unique opportunity to test existing comments and users for spam.

CARSON CITY, NEVADA, Соединенные Штаты, September 1, 2015 /EINPresswire.com/ --
CleanTalk company pleased to inform you that we have made a unique opportunity to test existing comments and users for spam.

This allows administrators of the Web sites automatically to check and identify spam bots, comments and users, which were not detected by conventional anti-spam tools. Checking existing comments and users is made on the basis of the nearly 2 million of certain spam bots. Any spam comments will be listed and then deleted for you, I can't explain how handy this feature is for a large website.

Detailed statistic allows CleanTalk customers to control the whole process.

This function is present for [WordPress](#) only, it will gradually be introduced for other CMS.

Spam used to be a real problem on websites, but the new features in this version have made CleanTalk even better – being able to automatically check all old comments and users in a few seconds is great, especially with larger sites where this could take a long time previously.

Spam bots messages (comments) often disguised as ordinary users posts, but contain advertising links or text. The main objectives of such messages are the translation of the user to a malicious resource, advertisement, or by the links to raise the position of their site. This compromises the site and can spoil the reputation, the search engines lower the position of the site in the search results. That is why reliable protection from spam bots is only way to prevent the undesirable effects of cyber attacks. CleanTalk provides reliable protection from attacks and spam bots and promotes strengthening information security throughout the world.

About CleanTalk

CleanTalk is a SaaS spam protection service for Web sites. CleanTalk uses protection methods which are invisible for site visitors. Connecting to the service eliminates needs for CAPTCHA, questions and answers and other methods of protection, complicating the exchange of information on the site. Their solutions are reliable, easy and efficient. The module is completely invisible to the visitors and allows you to permanently abandon the ways of protection that impedes the communication of visitors to the site (CAPTCHA, question-answer, etc.). CleanTalk allows you to automate protection against distributed from spam and registration spam bots.

The team CleanTalk has been developing a cloud spam protection system for 4 years and has created a truly reliable anti-spam service designed for you to ensure your safety.
