

# Note to Hillary Clinton: how you could have avoided the email 'scandal'

*'Filter not gefilte'*

LONDON, UNITED KINGDOM, September 3, 2015 /EINPresswire.com/ -- As the US state department releases thousands more of her documents, Hillary Clinton could have saved her current email embarrassment by using a sophisticated but simple to use message hub using [Threads®](#) technology.

The cloud-based communication system ingests emails and voice messages from almost any source and sorts them automatically into projects, subjects or work-based sections.

Emails and messages are a mess without a message hub

Threads® would have permitted Mrs Clinton, who is campaigning to become a US presidential candidate, to organise and keep track of her tens of thousands of emails and messages easily.

[Dr. John Yardley](#), the Managing Director of JPY, believes a message hub powered by Threads® technology is the first cloud service to unify email and phone calls for team-sharing and searching. “Threads® combines all of your organisation’s opted-in emails and, what we think may be a world first, telephone calls too, enabling you to find contacts, projects or phrases as quick and as easy as a Google search.”

“Instead of leaving slightly cryptic emails around, Hillary Clinton could have organised and separated her work messages from her personal emails with ease. Filter not gefilte, if you like.” in a reference to [a Clinton email](#) that has been widely published this week.

Threads®, already in use in a test phase, is the next generation of cloud-based team communications set to be officially launched this autumn. Surbiton-based JPY Ltd, the firm behind Threads®, is gearing up for release with a pilot offer to small businesses. JPY believes Threads® will be a serious UK challenge to the current Silicon Valley products.

JPY Ltd has recently been shortlisted for the upcoming Kingston Business Excellence Awards for Best Technology Company and for Best Creative and Media Sector Business.

ENDS

## About Threads®

Threads® software app opens up digital communications access for firms, allowing businesses to read, store and search through all their digital communications in one place as easy as a Google search, with a powerful, revolutionary new application developed by UK-based software company JPY Ltd.

Threads® helps firms to securely receive messages, search across all its digital files, find contacts, and share its latest project updates through the cloud-based application. It can search all of a firm's correspondence on a particular project, not just be limited to the current email search facilities that allows one employee to search only his or her emails.

Organisations that focus on projects or casework, such as law practices, architect firms and construction companies can keep track of all their work emails, phone calls, Skype calls, instant messages and even texts.

Threads is available for free for 3 months. No credit card details, no obligation. Just tell JPY what you think of it. Call +44 (0)208 390 8487 or visit the website and fill out the form.

## About JPY Ltd

JPY, the developers of Threads, is one of the longest established software companies in the UK. JPY currently represents manufacturers of over 30 software products, which are distributed through a channel of 100 specialist resellers. JPY re-invests a significant proportion of turnover into pure research and development and work in collaboration with several academic institutions.
