

World Sexual Health Day: CBCD Recommends Learning About Gene-Eden-VIR or Novirin

To honor World Sexual Health Day, the CBCD highlights the dangers of the herpes virus and points out effective remedies.

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, September 8, 2015 /EINPresswire.com/ --

“Infected with the herpes virus (HSV-1 or HSV-2)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#).” - Greg Bennett, CBCD

In recognition of World Sexual Health Day 2015, the Center for the Biology of Chronic Disease (CBCD) would like to focus on increasing education, public awareness, and support to anyone concerned about infection with the herpes virus. However, raising awareness about the virus and its effects on people is only a partial answer to the problem. This is because, as the CDC says on its website, “Most people who have herpes have no, or very mild symptoms. You may not notice mild symptoms or you may mistake them for another skin condition, such as a pimple or ingrown hair. Because of this, most people who have herpes do not know it.” (1) The CBCD believes that HSV infected individuals need an effective, scientifically proven treatment that reduces herpes symptoms naturally. The CBCD therefore recommends Gene-Eden-VIR or Novirin, which are two natural HSV remedies designed to help the immune system target the latent herpes virus.

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The studies showed that the Gene-Eden-VIR and Novirin formula

HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (2) The study authors also wrote that, “we observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (2)

Both products can be ordered online on the Novirin and Gene-Eden-VIR websites, here:

or

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

The CBCD points out that infection with the herpes virus can happen, as healthline.com notes, “from general interactions such as eating from the same utensils, sharing lip balm, or kissing. The virus spreads more quickly when an infected person is experiencing an outbreak. Additionally, it is possible to get genital herpes from HSV-1 if the individual has had cold sores and performed sexual activities during that time.” (3)

What treatments are available for herpes infections?

“Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day.” (2). There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

“We recommend that individuals concerned about transmitting herpes through kissing or through other means, take Novirin or Gene-Eden-VIR against the latent virus.” – Greg Bennett, CBCD
