A power cut is a temporary or long haul failure of the electric power to an area which can be caused

by short circuits, slip ups at power stations, spoilage of electric transmission lines, substations or other parts of the distribution system or the weighing down of electricity mains. These outages may last from a couple of minutes to some weeks hinging upon the nature of the power failure and the configuration of the electrical network. There are different types of emergencies a particular home has to face during a power blackout. A blizzard prone area will be different from one in a tropical area which normally faces storms and typhoons. Where as, urban areas undergo different threats than rural areas.

Simple Off-Grid System designed by Dr. David Ranko teaches people to make their own electricity and provides them with an inventory of natural materials like grass and branches that they can use as fuels to generate their own electricity and expand their own solar furnace. It contains a whole slew of training video modules which includes useful information regarding limitless energy such as why governmental control is causing electricity costs to upturn, why current solar panel systems cost as much as they do, why it is a good idea to have home's energy usage audited and how to make your home more energy efficient.
