

# Business Planning Software Innovator Deziner Software Partners With Morningstar For Currency Data

*Deziner Software, provider of entrepreneur-friendly business plan software options, selects Morningstar to ease worldwide use of financial modeling tools.*

NAPERVILLE, IL, USA, September 17, 2015 /EINPresswire.com/ -- Entrepreneurs and business owners worldwide rejoice: [Deziner Software](#) has joined with Morningstar to integrate fluid international currency data within [Intercept](#) (TM), a series of financial forecasting software and applications that help even the newest entrepreneur to produce a professional, comprehensive business plan.

It's a simple fact that businesses need cash flow to operate: new businesses need start-up funds for inventory, equipment, and materials, and established operations may need additional cash-flow to survive and grow. Investors and banks need entrepreneurs to clearly present their concept and financial projections in order to assess solvency, profitability and future stability - but business owners often don't have the knowledge to create such a forecast without spending significant time or money doing so.

Enter Deziner Software and Intercept (TM), the financial modeling software platform that makes producing a business plan user-friendly, approachable, and affordable. With the integration of Morningstar's currency data, business owners anywhere in the world can now utilize Intercept, in any specific currency.

"The ability to be able to change from one currency to the next with ease makes our software that much more valuable to our user community. In the world of business, it's a flat earth. Business is cross border and multi-lingual, and in many cases involves foreign currency considerations," said [Mark Quigley](#), President/CEO of Deziner Software (<http://www.dezinersoftware.com>.)

InterceptTM is a SaaS application and offers multiple features, including:

- Business Plan Canvas, Executive Summary, Lean/Full Business Plan and a Strategic Marketing Planning suite.
- Comprehensive Income, Cash Flow and Balance Sheet modeling.
- Ability to generate multiple scenarios to conceptualize various business cases.
