

Chad Lieberman New York Internet Whiz Talks about No Longer Sci-Fi: Wireless Electricity

Mr. Chad Ian Lieberman describes a world where everything is delivered through the air, including power

NEW YORK, NEW YORK, USA, September 22, 2015 /EINPresswire.com/ -- "Today Power cords tend to be messy and bulky. They take up space and are not great to look at either. They are, or rather have been until now, a necessity we make do around, because what's the alternative? However, all that may be changing in the future."

These were entrepreneur and technology expert Chad Lieberman's opening remarks during a recent gathering meant for technology experts and enthusiasts contributing to various parts of the techno-food chain in NY.

Discussing futuristic technologies changing daily living, [Chad Ian Lieberman](#) was excited to delve into the concept of wireless electricity and its impact in the world today. "Wireless electricity has been the topic of discussion for very long, but it hasn't worked for some reason, until now."

According to Mr. Lieberman, the engineering team at IT introduced the technology forming a company, to oversee the operations. He said that the concept was deemed safe for both human beings and pets, and would permanently take care of the challenges brought by wiring systems, which are prone to failures and other breakdowns, as well as expensive storage batteries.

The engineering world was eager to unveil the technology, which sounded almost too good to be true. "Soon we'll be able to live in a world where everything can be delivered through the airwaves. Just like we brought wireless internet, wireless electricity is hardly impossible."

"Imagine what life would be like if your laptop could tap into wireless electricity, and remain powered for life without having to drag around long cords and find power outlets. You could power your children's toys, charge your electric car on-the-go and basically run life free of those ugly plugs, wires and batteries," he expounded.

Concluding his session, Mr. [Chad Lieberman](#) expressed his confidence in the technology for home consumption. Adding that according to the research team at IT, the new technology would not add a significant bump to the cost of electricity currently.

About [Chad Lieberman](#) – New York – 6W

Chad Ian Lieberman is one of the best Internet Marketers in the United States at 6W. Presently, Chad Ian oversees all business development, project management and customer service,

Chad lieberman, chad ian lieberman, chad lieberman new york, chad ian lieberman new york, 6wim
