

MemeSpeak Speech Based Messaging for Texting, Blogs and Social Networks

MemeSpeak™ allows users to substitute speaking faces for messaging and textual blogging, from text inputs in several European and Asian languages.

TORONTO, ONTARIO, CANADA, September 28, 2015 /EINPresswire.com/ -- MemeSpeak™ is a new social network tool that allows users to substitute talking head animations for text messaging and textual blogging, from text inputs in European and Asian languages, to mobile on any social network or blog.

Toronto September 28, 2015
Toronto: MemeSpeak Inc announces MemeSpeak™, a Cloud to Mobile web application that supports multiple language text inputs and natural language audio outputs in English, French, Hebrew, Spanish, German, Portuguese, Mandarin, Cantonese, Hindi, Vietnamese, Russian, Italian, Japanese, Korean, Indonesian, Arabic and Czech.

The system can support hundreds of thousands of concurrent mobile or PC video clients and/or creators. Viewers do not need to be members of MemeSpeak™ to view the conversations on [social networks](#) or blogs. Any mobile platform with an internet browser can use the MemeSpeak™ system.

Globally, the website will appear in multiple Unicode-supported languages.

The system can be scaled and hosted on Cloud networks to support 100,000's of concurrent viewers.

The animations, created through text-to-speech on the MemeSpeak™ website, which has most of the features of YouTube, allow users to create the animations and connect them through dynamic “learning” playlists of textual (and emotional) memes (which are automatically hash tagged) – then, they are distributed freely among friends or members of any existing social networks Facebook, Twitter, etc – only the textual links to the animations are distributed. (In fact, any social network can utilize generic avatar episodes or the novel MemeSpeak™ playlist pages can be embedded.) The meme tags are also searchable, unlike most blog commentary, through Google, etc. and evolve

through SEO.

All data regarding playback is archived in our MySQL database on Linux servers, including all usage, views, demographics, locations, etc., The system can be licensed for special opinion gathering applications.

Payments for subscription and Virtual Goods are at mobile APP price levels, are offered through the website, and currently supported globally through PayPal. The system has also been implemented to work with pre-roll video ads.

Aside from the generic public avatar “blogging” applications, the system can be used for vertical applications – interactive advertising, new media news gathering, audience interactive online avatar drama/comedy, reality television for audience interaction/participation, and messaging apps vocal social network blogging for messaging apps.

Some aspects of the system are filed for patenting. Due to these novel techniques Cloud operational costs per user/per month are extremely low.

About MemeSpeak Inc.

The MemeSpeak system performs instant language transcoding from mobile and PCs text uploads and streams video animations to PC and mobile platforms (HTML5, Android, Windows, iPhone). The MemeSpeak system and animation creation contains novel algorithms for animation creation and multiuser support. MemeSpeak Inc products are available to service providers, entertainment broadcasters and corporations. <http://www.memespeaker.com> is the commercial website of MemeSpeak Inc.
