

'Chad Ian Lieberman' Professional PPC Specialist Talks Concerning Cure for Alzheimer's

Bioengineered drugs likely to provide the long-sought answer to curing neurodegenerative illnesses explain Internet Marketing Expert "Chad Lieberman".

NEW YORK, NEW YORK, USA, September 28, 2015 /EINPresswire.com/ -- "Advances in biotechnology and bioengineering have made the greatest difference in the healthcare sector. Thanks to continued research, we stand a better chance today at curing the world's non-curable diseases including HIV, Parkinson's disease and Alzheimer's. And the future looks even more promising."

These were Internet marketing expert, futurist and technology enthusiast New York City [Chad Ian Lieberman](#)'s opening remarks at a discussion he held recently to discuss the current and future technologies changing healthcare systems in the world. The meet up took place at his business premises in Manhattan, and featured guests from all over the state.

"Biotechnology drugs are made from living cells, and to date give us the best chance of curing diseases like Alzheimer's, diabetes, HIV and Parkinson's. A short while back, the FDA approved a drug made from cells extracted from bioengineered goats to treat a rare blood clotting disease. This is a big step for us in the fight."

Mr. [Chad Lieberman](#) was excited to note that presently, more than 630 new bioengineered drugs were at various phases of the drug research process, meaning that the future looks bright. He described Alzheimer's as a neurodegenerative disorder that starts in old age and worsens over time, eventually causing patient death.

"It has been linked to accumulation of plaque around nerve cells leading to impaired neural connections. Today, this plaque can be removed from the brain non-invasively using ultrasound therapy," Chad explained.

He described this as being a step ahead given that all past pharmaceutical treatments were rather strong and invasive, yet they were no more effective than slowing down the progress of the disease for a time.

"While research for both bioengineered drugs and non-pharmacological solutions are still in the clinical trial phases, we can expect to finally cut into the core of this disease and treat its root cause, instead of using therapies that merely treat symptoms and slow down neuron-degeneration."

Long discussions were held in consultation with experts concerning the subject, and the session ended on a positive note from Mr. Chad Ian Lieberman, who expressed great eagerness for the development of technologies to cure diseases that have until now remained incurable, and that in the next two years or so.

About [Chad Lieberman](#) – New York – 6W

Chad Ian Lieberman is one of the best Internet Marketers in the United States at 6W. Presently,

Chad Ian oversees all business development, project management and customer service, including running the day-to-day operations of 6W New York City.
