

# TOLSMA USA LLC, OUR NEW BRANCH IN THE USA!

*TOLSMA GRISNICH GROUP; supplying the complete range from storage to processing for potatoes, onions and carrots.*

BOISE, IDAHO, USA, September 30, 2015 /EINPresswire.com/ -- The Tolsma-Grisnich Group ("TGG"), two companies one brand. TGG is a privately held corporation operating throughout the World with their headquarters in Emmeloord, The Netherlands and several offices worldwide and since 2015 in Boise, Idaho. TGG provides the complete range from storage to processing for root products. Tolsma Storage Technology specializes in the climate controlled storage of agricultural root products. In addition to an above and underground ventilation systems for bulk storage, they also specializes in box storage with forced ventilation (blowing or suction) or space ventilation systems special designed for seed potatoes, table potatoes, onions, and carrots.

The Grisnich company is a manufacturer and specialist in the field of raw receiving, sorting, wet- and dry cleaning of potatoes, onions, carrots and other root products, even up to 400 tons an hour. Grisnich delivers already more than 25 years, raw receiving systems to the major American- and Canadian Processing French Fries industries.

Tolsma provides total solutions and components for innovative storage techniques, having more than 70 years storage knowledge, it gives you the highest storage efficiency with a "state of the art" automatic climate control systems, unlike any other product on the market. Tolsma has not only the "ultimate" storage solutions, we also design and built in-house our control panels, software programs and fans and our ultimate "Vison Control" system is using sensors to measure the relative humidity, CO<sup>2</sup> and temperatures during the storage period. Via the internet we can communicate directly with the customers iPhones and other mobile applications, in order to serve our customers with a 24/7 monitoring system. Furthermore, the Tolsma systems can be equipped with [EC fans](#), they realize 20% less power consumption than the AC series. At 80% of the rpm's, the EC fans realize 50% less power consumption, and the sound level is limited to a minimum. The manufactured fans are balanced like a tire before shipment and are designed for each agricultural root product. Sometimes, during storage there can be a loss of product up to 15-20%, which causes a lot of food waste. Tolsma's technology and know-how reduces such a factor to 2-5% which is already proven in European- and now also with the Canadian farmers. Of course, it all depends on the quality of the product coming in, and although we do control wound healing and storage into detail, we're not magicians.

Tolsma has always been a forerunner in developing equipment for the storage industries and are constantly improving and up-dating the existing system for the market, therefore Tolsma has decided to focus on the North American storage market to help the growers, traders, fresh-packers and processors to preserve their products for extended periods of time, which will result in less shrinkage, much better quality and at the end a better selling price.

TGG has selected Boise, Idaho to be the location for their new sales office due to the fact that one can by car visit the largest growers and fresh-packer processors within a 500-600 miles radius, and from Boise it is also easy to fly out to the other major growers in the surrounding states.

Our slogan is: Improving your agribusiness in an intelligent way!
