

CMV Can Cause Stomach Ulcers; The CBCD Reviews the Medical Evidence

Ulcers caused by the human cytomegalovirus can occur in the esophagus, stomach, small intestine, or colon. (1)

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, October 7, 2015 /EINPresswire.com/ --

“Infected with the cytomegalovirus (CMV)? The CBCD recommends [Gene-Eden-VIR](#) or [Novirin](#).” – Greg Bennett, CBCD

Research shows that the human cytomegalovirus (CMV) can cause painful ulcers throughout the gastrointestinal tract. For example, The American Society of Hematology writes that “the diagnosis of CMV gastrointestinal disease and pneumonia (is) by far the most common manifestations of CMV disease in the current era” (2) When the CMV infects the gastrointestinal tract, it causes inflammation, which can lead to painful ulcers. “Ulcers can occur in the esophagus, stomach, small intestine, or colon. Such ulcers are associated with symptoms such as: abdominal pain, difficulty swallowing or pain with swallowing, nausea, (and) vomiting. (1)

The Center for the Biology of Chronic Disease (CBCD) recommends that individuals concerned about infection with the latent CMV take Gene-Eden-VIR or Novirin to help their immune system target the latent virus. The formula of these natural, antiviral products was designed to help the immune system target latent viruses.

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD in two clinical studies that followed FDA guidelines. The studies

effective against the herpes family of viruses, including the human cytomegalovirus (CMV). The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with the CMV ... reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (3) The study authors also wrote that, “we observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (3)

Both products can be ordered online on the Novirin and Gene-Eden-VIR websites, here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

It should be noted that ulcers are not the only manifestation of CMV infection in the gastrointestinal tract. The Mayo Clinic says that CMV infection “can result in diarrhea, fever and abdominal pain; inflammation of your colon; and blood in your stool.” (4)

Are there treatments available against the cytomegalovirus?

Yes there are. “Several drugs are approved for the treatment of CMV infections in immunocompromised individuals. These drugs include ganciclovir, its oral prodrug valganciclovir, cidofovir, foscavir and fomivirsen. However, the use of these drugs in immunocompetent individuals is limited by their toxicity, poor oral bioavailability, modest efficacy, and the development of drug resistance.” (3) There are also two natural CMV remedies with a clinically proven formula.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure for conditions caused by CMV. However, two clinical studies showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was designed to help the immune system target the latent virus.

The CBCD believes that these facts, combined with the medical evidence presented above, indicate the need to target latent viruses like CMV. “We recommend that infected individuals talk to their doctors about Gene-Eden-VIR or Novirin.” – Greg Bennett, CBCD

All orders of Gene-Eden-VIR and Novirin are completely confidential, and no information is shared or sold to any third party. Privacy is assured.
