

A Slew Of New 'Futuristic' Technologies In Development And Coming Soon

Technologies in a broad range of sciences from Aeronautics, Health Care, to Energy are expected to be announced soon.

LOS ANGELES, CA, USA, October 7, 2015

/EINPresswire.com/ -- A new and upcoming scientist, Chris "CJ" Dabbs, has created several new technologies that are currently in development and will be ready for announcement in the coming weeks. These technologies are considered to be some of the most advanced technologies in the history of science including A Cure for Cancer, [Anti-Gravity](#), Hover-boards, and new developments in energy.

CJ talks about many of these breakthroughs at his website www.cjdabbs.com, where he explains in detail how some of these technologies work including his cure for cancer which he begins to explain by talking about how human cells are formed and stick together like a group of craft magnets when paired together properly as in the attached photo. At his website, CJ also talks openly about his experience going into [space](#) in a commercial airplane this past June.

No exact word yet on when an announcement is expected to be made but if we expect to see the hover-board before the end of 2015 an official announcement is expected to be made before the end of the year.
