

# Oral Herpes Decreases Quality of Life; The CBCD Reviews a Study

*Frequent episodes of oral herpes can impair quality of life (QoL) and impact healthcare. (1)*

ROCHESTER, NY, UNITED STATES, October 12, 2015 /EINPresswire.com/ --

“Infected with the herpes simplex virus (HSV-1 or HSV-2)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#) against the latent virus.” – Greg Bennett, CBCD

The oral herpes virus (usually HSV-1) can significantly damage the quality of life (QoL) in those it infects, according to a study. Dr. Dreno and colleagues wrote that “QoL is significantly impaired in a majority of patients, all the more so when HL (herpes labialis or oral herpes) episodes are more frequent.” (1) Dr. Dreno is from the Department of Dermatology at the Nantes University Hospital in Nantes, France.

But, how often is frequent? According to study authors, there is a drop in quality of life if an individual has four or more cold sore outbreaks per year. In fact, for these individuals, continual treatment is prescribed to about 50% of patients. (1) These individuals experience “pain, burning, tingling, or itching ... at the infection site before the sores appear. Sometimes these symptoms happen prior to the appearance of sores, bumps, pimple-like lesions, or blisters. Thereafter, clusters of painful blisters or vesicles erupt or ooze with a clear to yellowish fluid that may develop into a yellowish crust. These blisters break down rapidly and appear as tiny, shallow gray ulcers on a red base. A few days later, they become crusted or scabbed and appear drier and more yellow.” (2) It should be noted that “The most intense pain caused by these sores occurs at the onset and can make eating and drinking difficult.” (2)

The Center for the Biology of Chronic Disease (CBCD) recommends that anyone who experiences recurrent

or Novirin. The formula of these natural antiviral products was shown to reduce HSV symptoms in two separate post-marketing clinical studies that followed FDA guidelines. Additionally, it was designed to help the immune system target the latent form of the virus.

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The studies showed that the Gene-Eden-VIR and Novirin formula is effective against the family of herpes viruses, including HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, "individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR." (3) The study authors also wrote that, "We observed a statistically significant decrease in the severity, duration, and frequency of symptoms." (3)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin shares the same formula as Gene-Eden-VIR. The difference between the two is that Novirin has higher quality and more expensive ingredients.

Oral herpes sores can occur on the lips, gums, throat, the front of the tongue, the inside of the cheeks, and the roof of the mouth. "They can also extend down the chin and neck. The gums can become mildly swollen, red-colored, and may bleed. Neck lymph nodes often swell and become painful. People in their teens and 20s can develop a painful throat with shallow ulcers and a grayish coating on the tonsils." (2)

What treatments are available for herpes infections?

"Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day." (3) There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical

studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

“We recommend that individuals who are infected with a latent herpes virus, take Gene-Eden-VIR or Novirin.” – Greg Bennett, CBCD
