

Oral HPV: Should You Be Concerned?; the CBCD Reviews Medical Evidence

The human papillomavirus (HPV) is the leading cause of mouth and throat cancers. (1)

ROCHESTER, NY, UNITED STATES, October 26, 2015 /EINPresswire.com/ --

“Infected with the human papillomavirus (HPV)? We recommend taking [Gene-Eden-VIR](#) or [Novirin](#).” – Greg Bennett, CBCD

Many individuals wonder whether an infection with the human papillomavirus (HPV) in their mouths is something that should concern them. The answer is yes. This is because HPV is extremely easy to transmit and some strains easily infect the mouth and can cause either oral warts or lead to cancer. Dr. Adam Weiss notes that warts are “the most prevalent HPV skin lesion, but it can also be found in the oral cavity (the mouth). This lesion is usually associated with HPV 2 and 4.” (2) Additionally, the Oral Cancer Foundation says that, “HPV is the leading cause of oropharyngeal cancers (the very back of the mouth and part of what in lay terms might be called a part of the throat), and a very small number of front of the mouth, oral cavity cancers. HPV16 is the version most responsible, and affects both males and females.” (1)

The Center for the Biology of Chronic Disease (CBCD) recommends that anyone who may be concerned about an HPV infection in the mouth take Gene-Eden-VIR or Novirin. The formula of these natural, antiviral products was shown to reduce symptoms associated with HPV infection in two separate post-marketing clinical studies that followed FDA guidelines. It was designed to help the immune system target the latent HPV.

The formula of these natural antiviral products was tested by

clinical studies that followed FDA guidelines. The studies showed that the Novirin and Gene-Eden-VIR formula is effective against the HPV and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, "individuals infected with the HPV...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR." (3) The study authors also wrote that "we observed a statistically significant decrease in the severity, duration, and frequency of symptoms." (3)

Both products can be ordered online on the Novirin and Gene-Eden-VIR websites here:

<http://www.novirin.com>

and

<http://www.gene-eden-vir.com>

Novirin and Gene-Eden-VIR are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

It is important for the public to realize that "Scientists are still learning how oral HPV spreads. Only a few studies have looked into how people get infected. Many doctors suspect it's passed on through oral sex, but no one can say for sure. It's also uncertain if you can get the virus from deep "French" kissing ... you may never know you have HPV ... but in some cases, after many years, the virus can lead to cancer of the head or neck." (4)

What Treatments are Available for HPV infections?

"There are no drugs approved against the HPV. Current treatments include procedures, such as cryotherapy, conization, and the Loop Electrosurgical Excision Procedure (LEEP). These procedures use liquid nitrogen, a surgical knife (scalpel), a carbon dioxide (CO2) laser, or electrical current to remove the abnormal growths caused by the HPV. These growths include cells that harbor the active virus. The procedures do not target cells with the latent virus. Since they do not remove the latent virus, these procedures only produce a temporary remission." (3) In contrast, Novirin and Gene-Eden-VIR were designed to target the latent HPV, and were shown to reduce HPV symptoms in two separate post-marketing clinical studies that followed FDA guidelines.

The CBCD therefore recommends that HPV infected individuals take Novirin or Gene-Eden-VIR.
