

Can Genital Herpes Spread to the Mouth?; The CBCD Reviews the Medical Evidence

"HSV-2 can be spread through fluids (secretions) from the mouth or genitals."
(1)

ROCHESTER, NY, UNITED STATES,
October 26, 2015 /EINPresswire.com/ --

"Infected with the herpes simplex virus (HSV-1 or HSV-2)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#) against the latent virus." – Greg Bennett, CBCD

Many individuals are concerned about the possibility that they may spread the herpes virus (HSV-2) from the genitals to the mouths of their sexual partners. As WebMD notes, this concern is justified since, "HSV-2 can pass from one person's genitals to another person's mouth, resulting in oral herpes." (2) There are two strains of the herpes simplex virus. There is HSV-1 and HSV-2. Both strains can infect the genitals as well as the mouth. Dr. George and colleagues wrote in a study that when HSV-2 is transmitted from the genital to the mouth, "The orogenital contact may allow either serotype to cause oral or genital lesions. The two forms of HSV have a similar structure but differ in antigenicity, and HSV-2 is reputed to be of greater virulence." (3) In other words, HSV-2 may cause worse symptoms than an infection with HSV-1.

The Center for the Biology of Chronic Disease (CBCD) recommends that anyone who is concerned about cold sores or fever blisters due to HSV-2 or HSV-1 take Gene-Eden-VIR or Novirin, which were designed to target the latent herpes virus.

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The

is effective against the family of herpes viruses, including HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (4) The study authors also wrote that, “We observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (4)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin shares the same formula as Gene-Eden-VIR. The difference between the two is that Novirin has higher quality and more expensive ingredients.

Oral herpes sores can occur on the lips, gums, throat, the front of the tongue, the inside of the cheeks, and the roof of the mouth. “They can also extend down the chin and neck. The gums can become mildly swollen, red-colored, and may bleed. Neck lymph nodes often swell and become painful. People in their teens and 20s can develop a painful throat with shallow ulcers and a grayish coating on the tonsils.” (5)

What treatments are available for herpes infections?

“Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day.” (4) There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

“We recommend that individuals who are infected with a latent herpes virus, take Gene-Eden-VIR or Novirin.” – Greg Bennett, CBCD
