

Herpes: 3.7 Billion People are Infected with the Virus According to the WHO; The CBCD Reviews a Report

About 67 percent of the global population are infected with herpes simplex virus type 1 (HSV-1). (1)

ROCHESTER, NY, UNITED STATES,
November 2, 2015 /EINPresswire.com/ --

“Infected with the herpes virus (HSV-1 or HSV-2)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#).” - Greg Bennett, CBCD

As stated on CBS News regarding a report by The World Health Organization (WHO), about two thirds of the world's population (about 3.7 billion people) is infected with HSV-1, which is a strain of herpes usually associated with oral infections. “HSV-1 causes lesions on the lips or around the mouth commonly referred to as cold sores or fever blisters. It's primarily transmitted by oral-to-oral contact.” (1) Dr. Holly Phillips noted that “Most people contract the virus when they're kids. It usually lies dormant in the system. It's incurable. You never get rid of it but it lies dormant most of the time. Every now and again people have outbreaks and that's when you can see the blisters.” (1) Dr. Phillips is a CBS News medical contributor.

The Center for the Biology of Chronic Disease (CBCD) recommends that anyone infected with a herpes virus take Gene-Eden-VIR or Novirin. The formula of these natural antiviral products was shown to reduce HSV symptoms in two separate post-marketing clinical studies that followed FDA guidelines. Additionally, it was designed to help the immune system target the latent form of the virus.

is effective against the family of herpes viruses, including HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (2) The study authors also wrote that, “We observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (2)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin shares the same formula as Gene-Eden-VIR. The difference between the two is that Novirin has higher quality and more expensive ingredients.

Importantly, the report by the WHO states that there is an increase in the number of genital herpes infections that are caused by HSV-1. This may be due to an increasing acceptance of oral sex in the general population. “Experts say the numbers in the new report highlight the need for better education regarding how the virus is spread.” (1)

Because the numbers of individuals with a herpes infection are so high, the public needs to know what treatments are available.

“Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day.” (2) There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

“We recommend that individuals who are infected with a latent herpes virus, take Gene-Eden-VIR or Novirin.” – Greg Bennett, CBCD
