

Herpes is Mostly Contagious When Active Sores are Present; The CBCD Reviews a Report

Individuals may also be contagious even when they have no visible symptoms. (1)

ROCHESTER, NY, UNITED STATES,

--

“Infected with the herpes virus (HSV-1 or HSV-2)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#).” - Greg Bennett, CBCD

Although a person can transmit the herpes virus (HSV-1 or HSV-2) even when no symptoms are present, an individual is most contagious during an active outbreak. (1) Importantly, it should be noted that “people who are infected with the herpes simplex virus type 2, but don't have symptoms, still have active forms of the virus detected on their genital tract 10 percent of the time ... (and) ... people who do have symptoms of herpes infection carry active forms of the virus on their genital tract 20 percent of the time” (2) Additionally, a study found that “people with symptoms of genital herpes had more episodes of viral shedding over a year than those without symptoms.” (2) When a virus sheds, it is making copies of itself, and the infected person is more contagious. If you think you may have contracted the virus, see your doctor for testing.

The Center for the Biology of Chronic Disease (CBCD) recommends that anyone diagnosed with a herpes infection take Gene-Eden-VIR or Novirin.

The formula of these natural antiviral products was shown to reduce HSV symptoms in two separate post-marketing clinical studies that followed FDA guidelines. Additionally, it was designed to help the immune system target the latent form of the virus.

The formula of Gene-Eden-VIR and Novirin was tested by

studies showed that the Gene-Eden-VIR and Novirin formula is effective against the family of herpes viruses, including HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (3) The study authors also wrote that, “We observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (3)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin shares the same formula as Gene-Eden-VIR. The difference between the two is that Novirin has higher quality and more expensive ingredients.

It is important to note that “prevention strategies include using condoms, suppressive antiviral therapy and disclosure of having herpes to sexual partners. Each of these strategies is 50 percent effective in reducing the risk of genital herpes transmission.” (2)

What treatments are available for herpes infections?

“Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day.” (3) There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

“We recommend that individuals who are infected with a latent herpes virus, take Gene-Eden-VIR or Novirin.” – Greg Bennett, CBCD
