

True or False: Lesbians Don't Get Herpes; The CBCD Reviews the Medical Evidence

The answer is "false." Lesbians are at risk for the same sexually transmitted infections as heterosexual couples. (1)

ROCHESTER, NY, UNITED STATES, November 20, 2015 /EINPresswire.com/ -- "Infected with the herpes virus (HSV-1 or HSV-2)? The CBCD recommends taking <u>Gene-Eden-VIR</u> or <u>Novirin</u>." - Greg Bennett, CBCD

According to a report, many people have the false belief that women who have sex with women are not at risk for genital herpes infections. However, the truth is that "HSV-2 infection occurs in nearly 1 in 10 lesbians and is not predicted by report of sex with men or sexual identity. Most lesbians infected with HSV-2 are not aware of their infection. Sexual transmission of HSV-1 may occur more frequently among lesbians than among heterosexual women." (2) In fact, "Some STIs are more common among lesbians and bisexual women and may be passed easily from woman to woman ... lesbian and bisexual women can transmit STIs to each other through: skin-to-skin contact, mucosa contact (e.g., mouth to vagina), vaginal fluids, menstrual blood, sharing sex toys." (1)

The Center for the Biology of Chronic Disease (CBCD) recommends that women diagnosed with a herpes infection take Gene-Eden-VIR or Novirin. The formula of these natural antiviral products was shown to reduce HSV symptoms in two separate post-marketing clinical

studies that followed FDA guidelines. Additionally, it was designed to help the immune system target the latent form of the virus.

Click to learn more about herpes symptoms.

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The is effective against the family of herpes viruses, including HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, "individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR." (3) The study authors also wrote that, "We observed a statistically significant decrease in the severity, duration, and frequency of symptoms." (3)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

http://www.gene-eden-vir.com

and

http://www.novirin.com

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin shares the same formula as Gene-Eden-VIR. The difference between the two is that Novirin has higher quality and more expensive ingredients.

It is important to note that as Amy Hendel, a popular and recognizable health/medical television correspondent notes in response to a question from a lesbian ... "unlike a man - you don't have a condom option for protection. This might be a strong reason for your partner to consider daily Valtrex - which does help to reduce the risk of her exposing you to herpes - but you need to realize that even if she takes Valtrex - it is not 100% assurance of not spreading herpes." (4)

What treatments are available for herpes infections?

"Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day." (3) There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

The CBCD reminds individuals that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

"We recommend that that women infected with the latent HSV take Gene-Eden-VIR or Novirin." – Greg Bennett, CBCD
