

Bad News: Oral Sex Could Lead to HPV Infection; the CBCD Reviews a Report

“Blowjobs can lead to cancer. Well, not directly, but they spread HPV, and HPV can cause cancer.” (1)

ROCHESTER, NY, UNITED STATES,
November 20, 2015 /EINPresswire.com/

--

“Infected with the human papillomavirus (HPV)? We recommend taking [Gene-Eden-VIR](#) or [Novirin](#).” – Greg Bennett, CBCD

Many individuals believe that oral sex, and in particular, “blowjobs,” are relatively “safe” when it comes to spreading a sexually transmitted infection (STI). However, the truth is the opposite. People “often don’t think twice before putting their mouths on someone’s junk. Surprise! Oral sex basically carries the same risks as vaginal sex, because hoo-ha or not, it’s still sex.” (1) In fact, this is important for individuals to understand since, “HPV, or human papillomavirus, accounts for about 25% of mouth cancers and 35% of throat cancers worldwide.” (1) Even if HPV doesn’t cause cancer, some strains can cause oral warts. As Dr. Adam Weiss notes, warts are “the most prevalent HPV skin lesion, but ... can also be found in the oral cavity (the mouth). This lesion is usually associated with HPV 2 and 4.” (2)

The Center for the Biology of Chronic Disease (CBCD) recommends that anyone who may be concerned about an HPV infection in the mouth take Gene-Eden-VIR or Novirin. The formula of these natural, antiviral products was shown to reduce symptoms associated with HPV infection in two separate post-marketing clinical studies that followed FDA guidelines. It was designed to help the immune system target the latent HPV.

Hanan Polansky and Edan Itzkovitz from the CBCD in two clinical studies that followed FDA guidelines. The studies showed that the Novirin and Gene-Eden-VIR formula is effective against the HPV and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, "individuals infected with the HPV...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR." (3) The study authors also wrote that "we observed a statistically significant decrease in the severity, duration, and frequency of symptoms." (3)

Both products can be ordered online on the Novirin and Gene-Eden-VIR websites here:

<http://www.novirin.com>

and

<http://www.gene-eden-vir.com>

Novirin and Gene-Eden-VIR are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

"According to online health clinic Euroclinix, trends indicate that mouth cancer caused by HPV is on the rise, and may even overtake mouth cancer caused by smoking. The number of people contracting HPV is increasing annually, and an estimated 90% of men and 80% of women will contract a strain of the virus at some point in their lives." (1)

What Treatments are Available for HPV infections?

"There are no drugs approved against the HPV. Current treatments include procedures, such as cryotherapy, conization, and the Loop Electrosurgical Excision Procedure (LEEP). These procedures use liquid nitrogen, a surgical knife (scalpel), a carbon dioxide (CO2) laser, or electrical current to remove the abnormal growths caused by the HPV. These growths include cells that harbor the active virus. The procedures do not target cells with the latent virus. Since they do not remove the latent virus, these procedures only produce a temporary remission." (3) In contrast, Novirin and Gene-Eden-VIR were designed to target the latent HPV, and were shown to reduce HPV symptoms in two separate post-marketing clinical studies that followed FDA guidelines.

The CBCD therefore recommends that HPV infected individuals take Novirin or Gene-Eden-VIR.
