Developers Work Smarter, Not Harder with the Latest from Isomorphic Software

Isomorphic Software today released SmartClient 10.1 | Smart GWT 5.1 to drastically increase developer productivity and end-user adoption.

SAN FRANCISCO, CALIFORNIA, UNITED STATES, December 10, 2015 /EINPresswire.com/ -- When time gets short on projects, it is typically all the "nice-to-haves" that get cut to ensure the deadline is hit. Things like the silky smooth animated navigation bars in mobile, or minute details like the ability to have the format mask persist in a field when the user puts their cursor in it, but disappear as soon as they start typing. In isolation, each of these 'details' is insignificant. Collectively, they transform the final enterprise web application from something end users despise, into something they love. (OK, love may be too strong a word for an enterprise application, but you get the point).

When push comes to shove, and a deadline has to be met, the usability / adoption argument is a difficult one to win. That's why Isomorphic Software, in their latest release – SmartClient 10.1 | Smart GWT 5.1 – have built the "nice-to-haves" into their platform. Developers don't – for example - have to spend hours trying to right align an icon inside a text input field, and have it actually perform an action when clicked. With Isomorphic's 10.1 | 5.1, things just work the way they should. This frees up developers to focus on "more important things", while ensuring the final application will be both complete on time, and adopted by the end-users.

SmartClient 10.1 | Smart GWT 5.1 provides a whole lot more besides user experience enhancements. Just a few examples are:
• Data import enhancements such as a partial commit option for better error handling, and BatchLoader support for additional formats (XML, JSON)
• New and improved APIs - from FileSource APIs that allow saving and loading files to DataSources, to avoiding precision loss with the stringInBrowser server-side setting
• Visual Builder additions like 'Deck' and 'NavPanel' components, and the ability to attach multiple actions to an event

SmartClient 10.1 / Smart GWT 5.1 actually incorporates improvements across the entire platform, many of which were customer driven via Isomorphic's Feature Sponsorship Program.

The Isomorphic Software Winter 2015 Release is now available to all existing and new customers. For more information – including a full feature list - visit www.SmartClient.com

About Isomorphic Software
Isomorphic Software has over a decade of industry leadership, providing technology platforms for building Enterprise web applications. Companies around the world use the SmartClient Platform, including Cisco, Boeing, Toyota and Genentech.
