

# Half of All Individuals Will Have an STD by Age 25; The CBCD Reviews a Report

*Additionally, every year, there are at least 20 million new cases of sexually transmitted infections in the United States. (1)*

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, December 20, 2015 /EINPresswire.com/ --

“Infected with the herpes virus (HSV-1 or HSV-2)? The CBCD recommends taking [Novirin](#) or [Gene-Eden-VIR](#).” - Greg Bennett, CBCD

In the United States, one in six people have HSV-2, “and nearly everyone will be infected with HPV (human papilloma virus) at some point in their lives,” according to the CDC. (1) Amber Madison from the National Coalition for Sexual Health said that, “It may be true that most people don’t talk about these infections in the same way they’d open up about having the flu - but that doesn’t change the fact that a good chunk of the population has had, does have, or will have an STI.” (1) Ms. Madison continued, noting that “while the herpes virus remains in the body permanently, the actual outbreaks it causes can be prevented or shortened with medication.” Dr. Hook agreed, saying that “taking antiviral medications for herpes dramatically decreases symptomatic outbreaks and reduces the likelihood of spreading it by more than 50%.” (1)

The Center for the Biology of Chronic Disease (CBCD) recommends that individuals with a viral STI like genital herpes, take Gene-Eden-VIR or Novirin. The formula of these natural antiviral products was shown to reduce HSV symptoms in two separate post-marketing clinical studies that followed FDA guidelines. Additionally, the formula was designed to help the immune system target the latent HSV-1.

studies showed that the formula is effective against the herpes simplex virus, and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with the HSV ... reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (2) The study authors also wrote that, “we observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (2)

Both products can be ordered online on the Novirin and Gene-Eden-VIR websites, here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses.

To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims. Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

The CBCD recommends that if an individual has herpes, then using condoms, refraining from sex when having an outbreak, and , taking the aforementioned anti-viral remedies may help prevent the spread of herpes, and may help the immune system more efficiently target the latent virus.

What medications are available for herpes STIs?

Until now, drugs approved for the treatment of HSV infections include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, “a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day.” (2) Unlike drugs or vaccines, which target the active herpes virus, there are two natural remedies that target the latent HSV. These clinically backed remedies are Novirin and Gene-Eden-VIR.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

“We recommend that individuals who may be concerned a latent herpes virus infection take Novirin or Gene-Eden-VIR.” - Greg Bennett, CBCD
