

# WP Site Guardian Launched and Poised to be a Better Wordpress Security Plugin

*New Wordpress plugin uses anti-intrusion security technology to stop hackers and malicious attacks.*

GAINESVILLE, VA, USA, December 22, 2015 /EINPresswire.com/ -- Successful Wordpress security experts and developers, Chris Hitman and Michael Thomas, are pleased to announce the launch of new Wordpress plugin, [WP Site Guardian](#). Released on 12 December 2015, this cutting edge anti-intrusion technology auto-detects and blocks exploits, securing Wordpress sites from thousands of security vulnerabilities and hacking exploits.

Offering a better Wordpress security plugin and an alternative approach to other security systems, WP Site Guardian is the only plugin on the market that offers active protection against current and future exploits by looking at visitor behaviour rather than the attack code. WP Site Guardian reduces the risk of hacking by monitoring and blocking based on behaviour. Suspicious activity is detected and the IP is blocked and banned, eliminating the exploit and reducing the risk of the site being hacked.

In the last 12 months over a million websites were hacked or defaced by exploits. Exploits are used to target vulnerabilities or programming mistakes allowing hackers to break into a site and cause catastrophic damage by injecting malware, defacement and spam. With no skill required, anyone can download and copy an exploit into a website; this includes hackers, disgruntled customers or even a bad competitor. Restoring systems and company reputations after an attack can be a costly and time consuming task.

"The problem is that most Wordpress plugins and themes are not written by security experts and hackers know that," says Chris Hitman, developer and WP security expert. "WP Site Guardian is a new generation security plugin that monitors the way visitors use your site and detects & blocks exploit execution attempts."

Recent Wordpress tests carried out by Chris Hitman and Michael Thomas identified that none of the current top plug-ins or solutions offered any real protection against exploits, leaving sites wide open to hackers. WP Site Guardian can provide users with peace of mind that their Wordpress site is securely protected in the right way. With protection against 92% of attacks and limited time launch offers starting at \$27, now is the time to upgrade Wordpress security plugin systems.
