

What are the Signs that You Have Herpes?; The CBCD Answers a Survey Question

"The textbook symptom of genital herpes is a cluster of small fluid-filled blisters that break," but there are more. (1)

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, December 22, 2015 /EINPresswire.com/ --

"Infected with the herpes virus (HSV-1 or HSV-2)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#)." - Greg Bennett, CBCD

The Center for the Biology of Chronic Disease (CBCD)'s December 2015 survey found that 74% of participants were unfamiliar with the signs of an active genital herpes infection. According to WebMD, some of these signs include "a cluster of small fluid-filled blisters that break, forming painful sores that crust and heal during several days. Affected areas include the penis, scrotum, vagina, vulva, urethra, anus, thighs, and buttocks." However, many people don't have these signs. In fact, WebMD goes on to note that "Some people have no symptoms at all, while others get symptoms that can be easily mistaken for razor burn, pimples, bug bites, jock itch, hemorrhoids, an ingrown hair, or a vaginal yeast infection. After you're infected, the symptoms go away, but can flare up from time to time. Luckily, the first outbreak usually is the worst. And some people may have just one or two outbreaks in their lifetime." (1)

The Center for the Biology of Chronic Disease (CBCD) recommends that anyone diagnosed with a herpes infection take Gene-Eden-VIR or Novirin. The formula of these natural antiviral products was shown to reduce symptoms associated with herpes viruses in two separate post-marketing clinical studies that followed FDA guidelines. Additionally, it was designed to help the immune

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The studies showed that the Gene-Eden-VIR and Novirin formula is effective against the family of herpes viruses, including HSV-1 and HSV-2. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, "individuals infected with (a herpes virus)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR." (2) The study authors also wrote that, "We observed a statistically significant decrease in the severity, duration, and frequency of symptoms." (2)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin shares the same formula as Gene-Eden-VIR. The difference between the two is that Novirin has higher quality and more expensive ingredients.

"The only sure-fire way to avoid getting genital herpes is to abstain from sex or have sex only with someone who is also herpes-free. Short of that, a latex condom offers some protection if it covers the infected area. Remember, you can get genital herpes by receiving oral sex (fellatio, cunnilingus, analingus) from someone with a cold sore on the mouth. Likewise, you can get oral herpes from someone's genitals by way of oral sex." (1)

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure for infections with a herpes virus. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely and effectively reduce symptoms associated with herpes viruses. Additionally, it was designed to help the immune system target these latent viruses.

"We recommend that individuals who are infected with a latent herpes virus, take Gene-Eden-VIR or Novirin." – Greg Bennett, CBCD
