

## U.K. Begins to Offer the HPV Vaccine to Gay Men; the CBCD Reviews a Report

*Health Minister Mark Drakeford said that "A cancer vaccination is to be offered to gay men under the age of 45." (1)*

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, December 22, 2015 /EINPresswire.com/ --

"Infected with the human papillomavirus (HPV)? The CBCD recommends taking [Novirin](#) or [Gene-Eden-VIR](#)." – Greg Bennett, CBCD

The United Kingdom has begun offering the HPV vaccine to gay men to help protect against certain HPV caused cancers, which are seen more commonly in this community. (1) According to BBC News, "Expert advice has said vaccination can offer protection against other types of cancer commonly seen in gay men. An advisory committee also recommended it for sex workers and people who are HIV positive, but is still considering its merits for adolescent boys." (1)

It is important to note that according to a recent study, "HPV infection is common and may cause cancer among men who have sex with men (MSM)." (2) In that study, anal HPV infection was found in 85% of HIV-positive and 59% of HIV-negative individuals. The CBCD recommends that individuals infected with HPV take Gene-Eden-VIR or Novirin against the latent virus. The formula of these natural antiviral products was shown to reduce symptoms associated with HPV infection in two separate post-marketing clinical studies that followed FDA guidelines.

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The studies showed that the Gene-Eden-VIR and Novirin formula

viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with the HPV ... reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (3) The study authors also wrote that, “we observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (3)

Both products can be ordered online on their websites here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Novirin and Gene-Eden-VIR are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses.

To date, Novirin and Gene-Eden-VIR are the only natural antiviral products on the market with published clinical studies that support their claims. Note: Novirin has the same formula as Gene-Eden-VIR. However, it contains higher quality and more expensive ingredients.

In the BBC report, “Mr Drakeford said a targeted programme for sexually active gay men under 45 would be introduced following the recommendation of the Joint Committee on Vaccination and Immunisation (JCVI), which advises all UK governments. ‘Men who have sex with men are a group who receive little indirect protection from the highly successful HPV vaccination programme for adolescent girls. I’m pleased to announce that I have approved the introduction of a new targeted HPV vaccination programme for men who have sex with men up to the age of 45.’” (1)

The CDC notes that “You can get HPV by having oral, vaginal, or anal sex with someone who has the virus. It is most commonly spread during vaginal or anal sex. HPV can be passed even when an infected person has no signs or symptoms. Anyone who is sexually active can get HPV, even if you have had sex with only one person. You also can develop symptoms years after you have sex with someone who is infected making it hard to know when you first became infected.” (4)

“We believe that individuals concerned about HPV, should take Gene-Eden-VIR or Novirin. The formula of these natural products was designed to help the immune system target the latent virus.” – Greg Bennett, CBCD

What Treatments are Available that Target HPV?

“There are no drugs approved against the HPV. Current treatments include procedures, such as cryotherapy, conization, and the Loop Electrosurgical Excision Procedure (LEEP). These procedures use liquid nitrogen, a surgical knife (scalpel), a carbon dioxide (CO2) laser, or electrical current to remove the abnormal growths caused by the HPV. These growths include cells that harbor the active virus. The procedures do not target cells with the latent virus. Since they do not remove the latent virus, these procedures only produce a temporary remission.” (3) In contrast, Novirin and Gene-Eden-VIR were designed to target the latent HPV.

The CBCD therefore recommends that individuals infected with the latent HPV take Novirin or Gene-Eden-VIR.
