

Video on Gene-Eden-VIR and Latent Viruses Grabs Massive Views in Just 4 Days

A new Youtube video from Lilac Corp. has gained a significant number of views, which highlights the popular subject of natural antiviral products.

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, January 5, 2016 /EINPresswire.com/ --

Our videos are designed to explain in every day language the science concerning these viruses, ideas about latency, and much more.

Ashley Cohen, Video Host

The Center for the Biology of Chronic Disease (CBCD) points out a new Youtube video, entitled “Are Latent HPV, Herpes, EBV and Other Viruses Dangerous to Your Health?,” which answers the question featured in the title. The video has gained almost 1,000 views in a short time period despite almost zero marketing.

“We feel like the video is gaining views simply because of the importance of the topic. People see it, then they tell their

family and friends, and they watch it too. The public is continually asking questions about the dangers of herpes, of HPV, and other viruses. They want to know what sort of health problems can arise from infection with one of these viruses. The news is throwing out terms like ‘latent,’ and ‘latency’ in connection with these viruses, but most people don’t know what these words mean. Our videos are designed to explain in every day language the science concerning these viruses, ideas about latency, and much more. We find that this approach is really resonating with the public.” – Ashley Cohen, Video Host

The “Are Latent HPV, Herpes, EBV and Other Viruses Dangerous to Your Health?” video can be seen here:

When discussing Gene-Eden-VIR and the scientific and medical evidence that back its antiviral formula, Ms. Cohen is referring to two separate post-marketing clinical studies that followed FDA guidelines. These found that the Gene-Eden-VIR formula reduces symptoms associated with certain viruses, such as the herpes simplex virus and the human papillomavirus (HPV), among others.

Additionally, the formula of these products was designed to help boost the immune system, and target the latent form of these viruses.

The formula of Gene-Eden-VIR was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The studies showed that the Gene-Eden-VIR formula is effective against the family of herpes viruses, including HSV-1 and HSV-2 (and other viruses). The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (1) The study authors also wrote that, “we observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (1)

Gene-Eden-VIR can be ordered on its website, here:

<http://www.gene-eden-vir.com>

Gene-Eden-VIR is a natural antiviral dietary supplement. Its formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses.

To date, Gene-Eden-VIR and its sister product, Novirin, are the only natural antiviral products on the market with published clinical studies that support their claims.

“We recommend that individuals concerned about infection with a latent herpes or HPV virus, take Novirin or Gene-Eden-VIR. We also recommend that people view the videos produced on the subject of Gene-Eden-VIR and latent viruses.” – Greg Bennett, CBCD
